

FineReport V10.0

A Product Introduction

After 16 years of development, we have become “The Most Powerful Big Data BI and Analytics Software Vendor” in China

Headquarter in Wuxi, Over **1600** Employees, **15** Global Branch Offices

Distribution

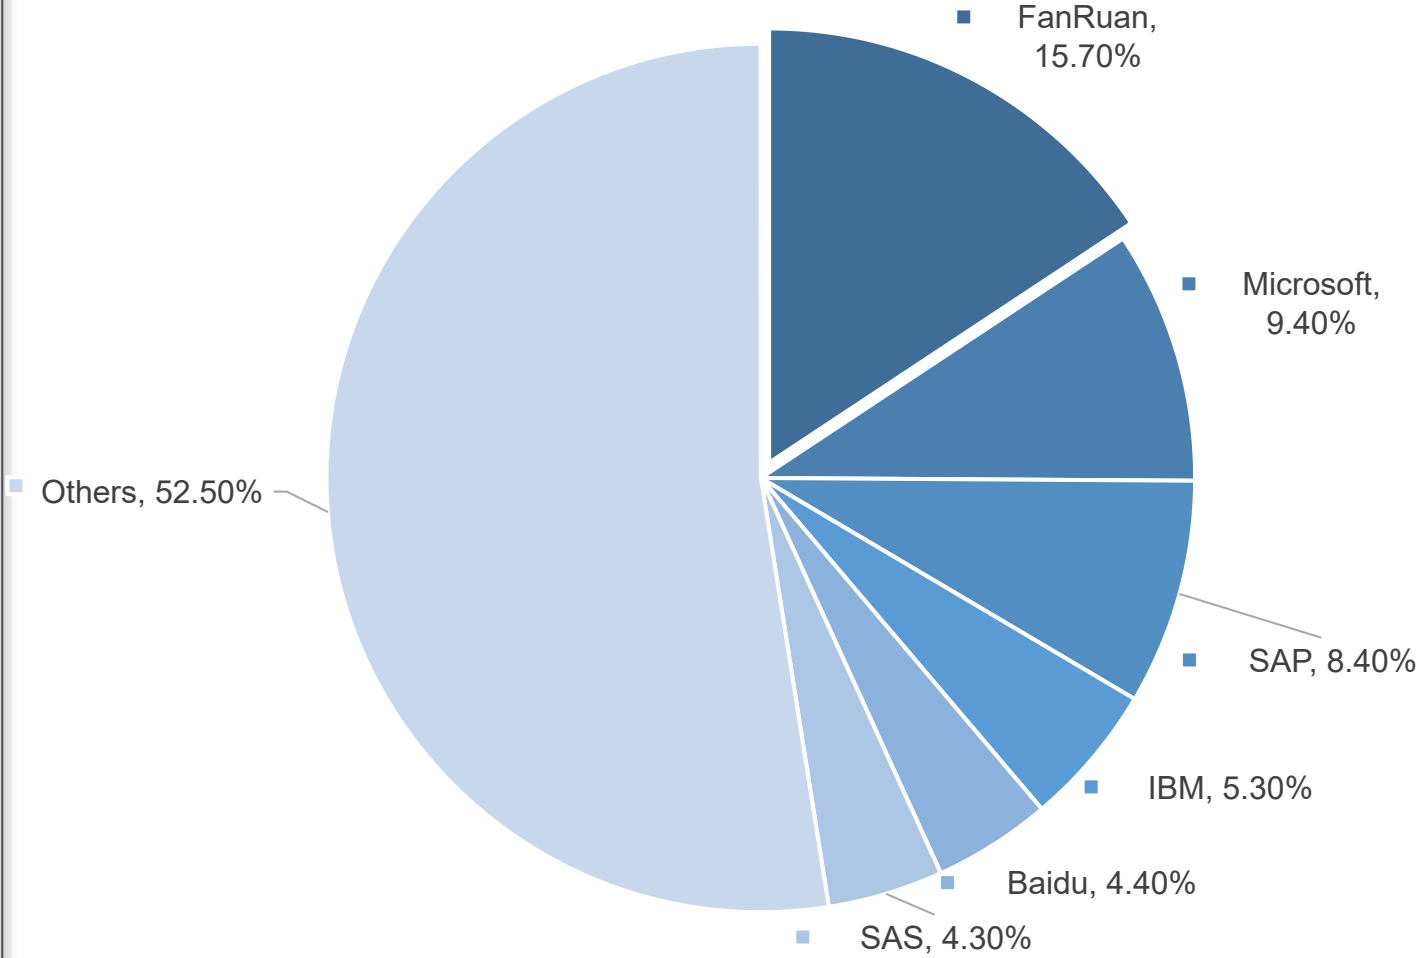

- Headquarter: Wuxi
- **15 Global Branches:**
Mainland China, Taiwan, Southeast Asia, Japan, Korea, the US, Europe, etc.

Enterprise Scale

- Employees over 1600
- **Ranks 1st** in China's BI market

FanRuan Has been Approved by a Great Number of Organizations

BI Market Share in China in 2020

...

Why choose FineReport

1.1 Software Companies are Trapped with Custom Code or OSS

All the Problems above have Brought Uncertain Risks to Customers

In the short term,
delayed deliveries will result in
An uneconomic project

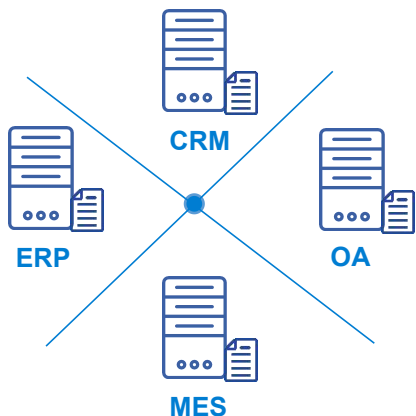

In the long term,
the competitiveness of enterprise
will drop

>> CIOs need powerful, flexible and extensible business reporting tools
to develop reports quickly and accelerate the project progress

1.2 Corporate Users are Trapped by Data Islands, Low Efficiency and Low Utilization Rate

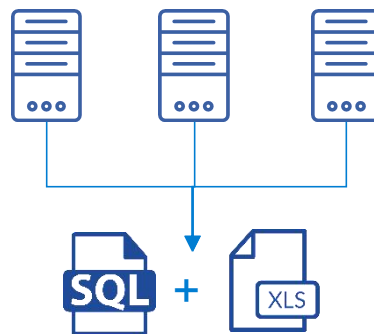

Data Islands

In every business systems

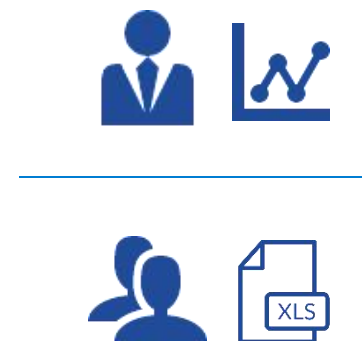

Independent reports and analysis method will lead to the problem of data island, also the system lacks of a unified data analysis platform.

Low Efficiency

Cross-system report making and data analysis require us to work in the traditional way such as using SQL + Excel, which will lead to low work efficiency.

Low Utilization Rate

Traditional method of making reports and data analyses are limited in features & application scenarios. Tools are only available for senior managers.

All the Problems above will Negatively Impact Enterprises 'Management and Operation

Useful information cannot reach to managers effectively

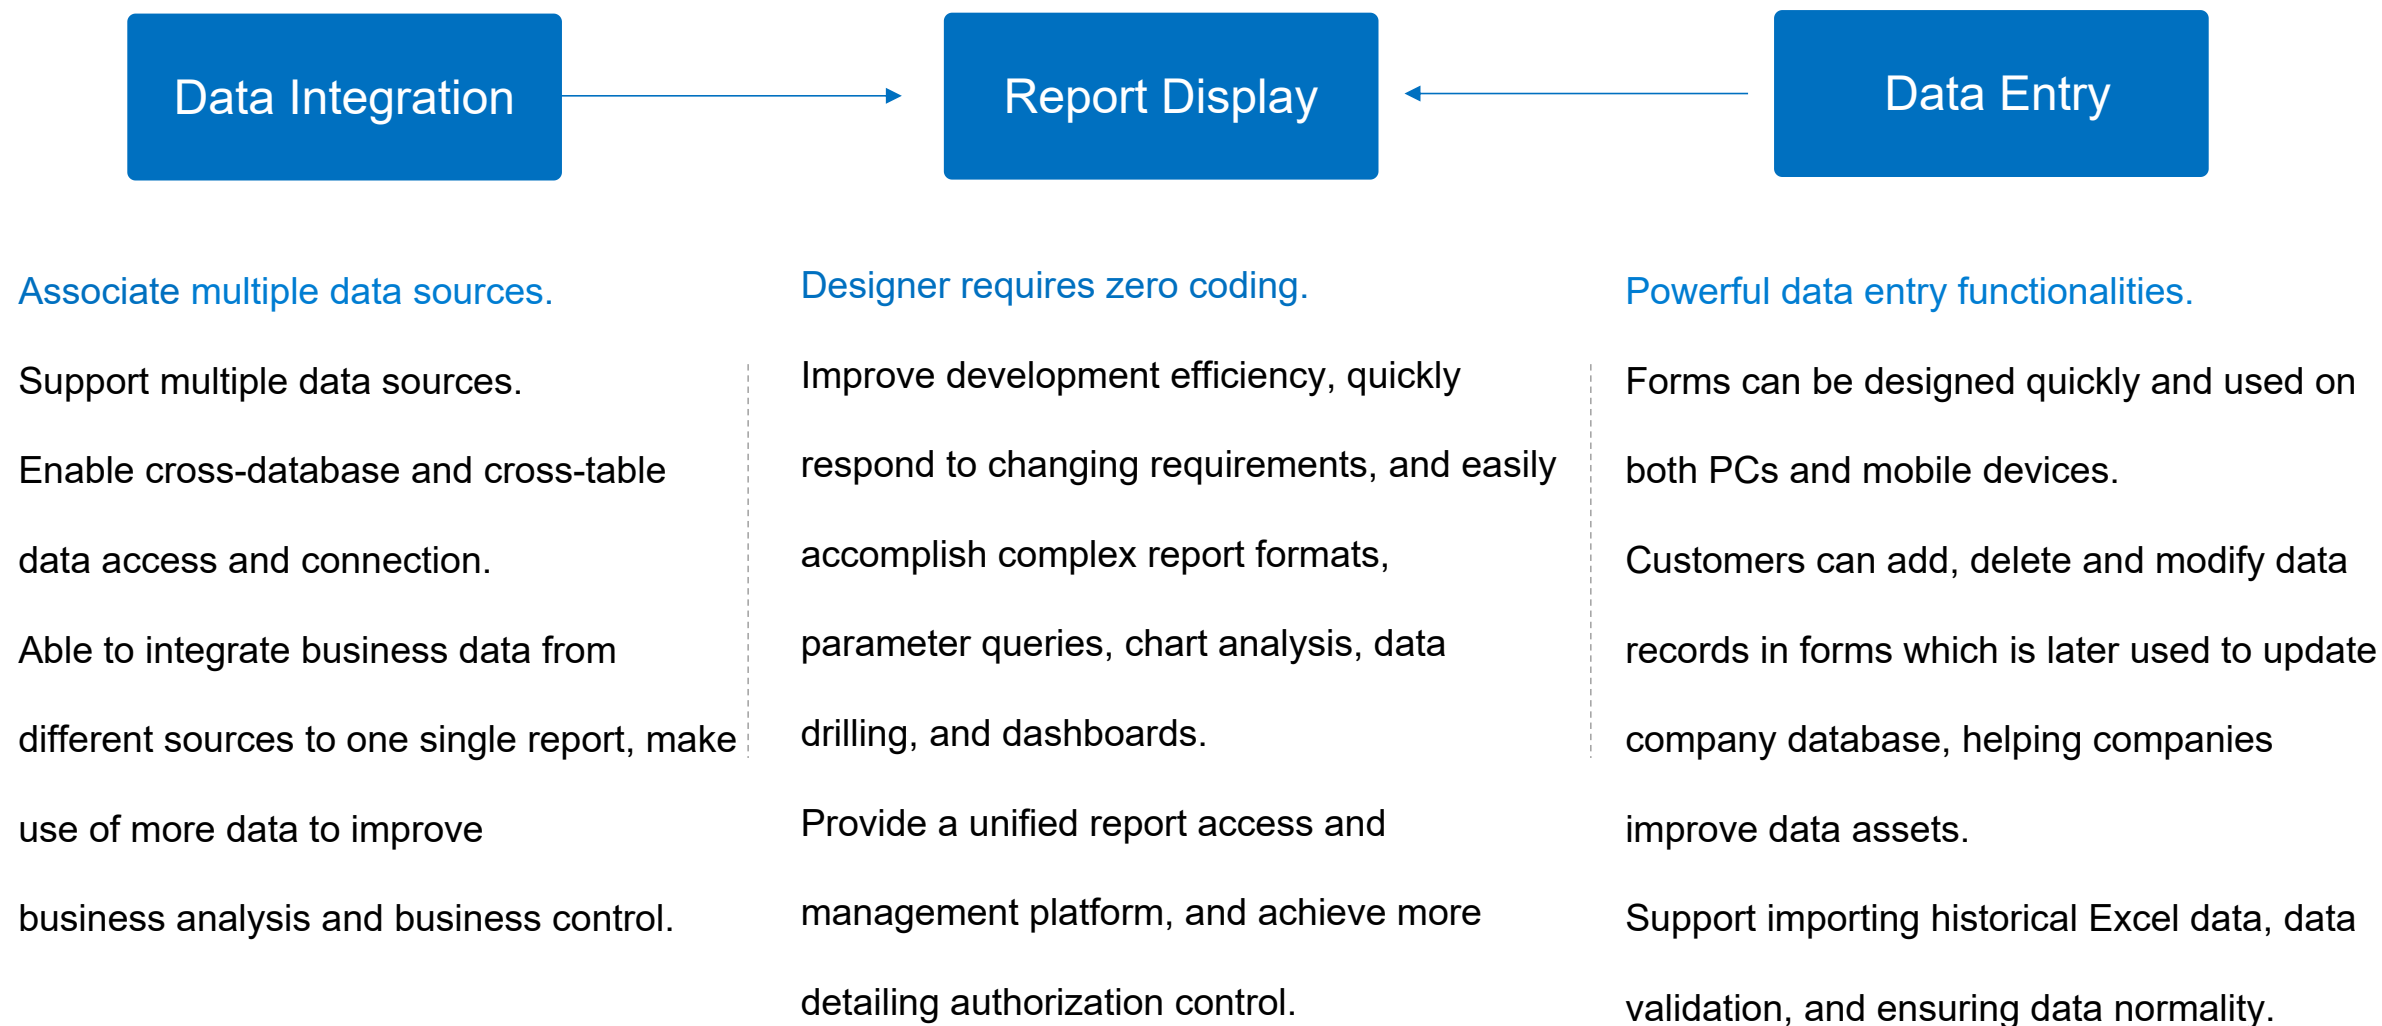

Decisions are only made by instinct

Increasing data asset turnover brings overall loss to enterprise

>> Enterprises need to choose professional business reporting tools in order to make good use of data assets and realize the importance of data-driven management.

1.3 How does FineReport solve the problems?

02

...

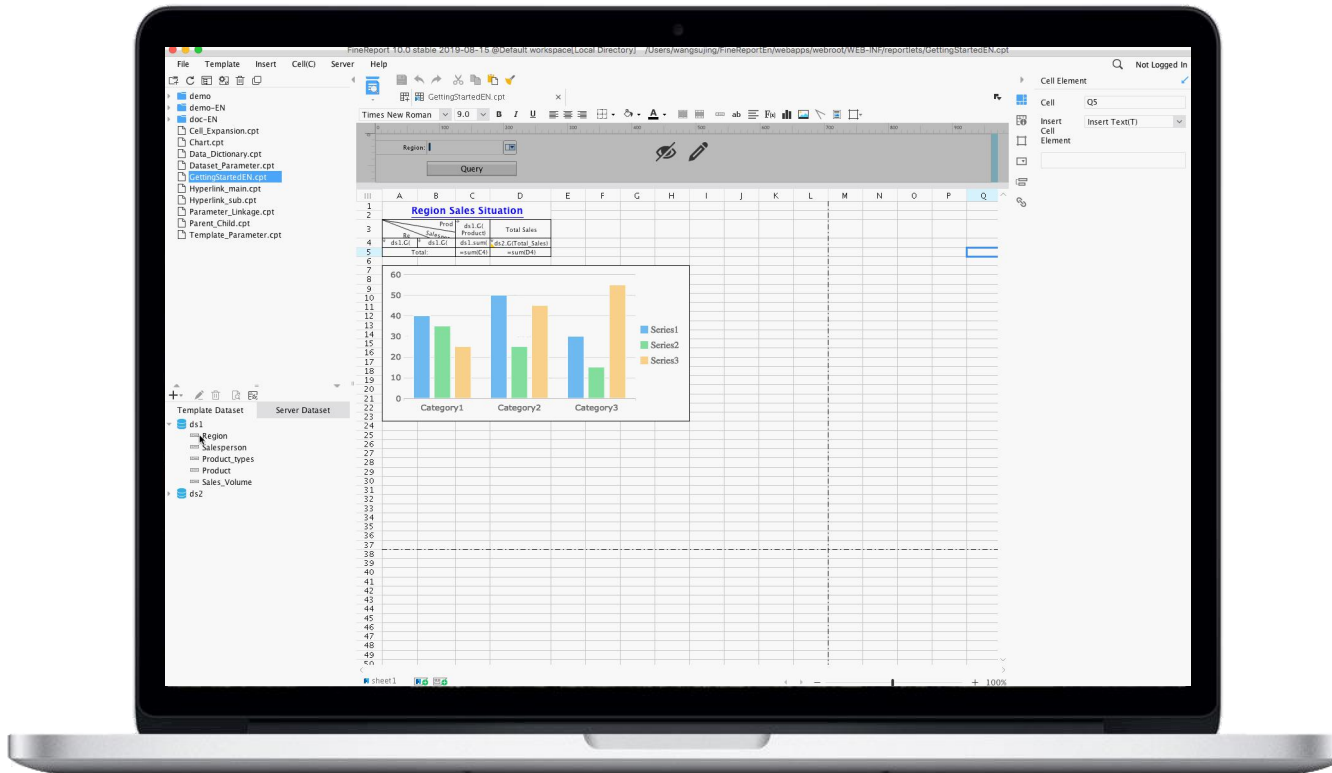

Report Designer

2.1 FR Application Architecture : Report Designer and Server

2.2 FR Designer Properties: Zero-Code, Drag & Drop Operations, as Simple as Excel

Drag and Drop Operations

1

Excel-like interface.
Bind data columns to cells by dragging
and dropping operation.

2

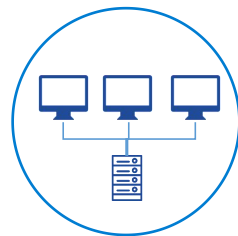

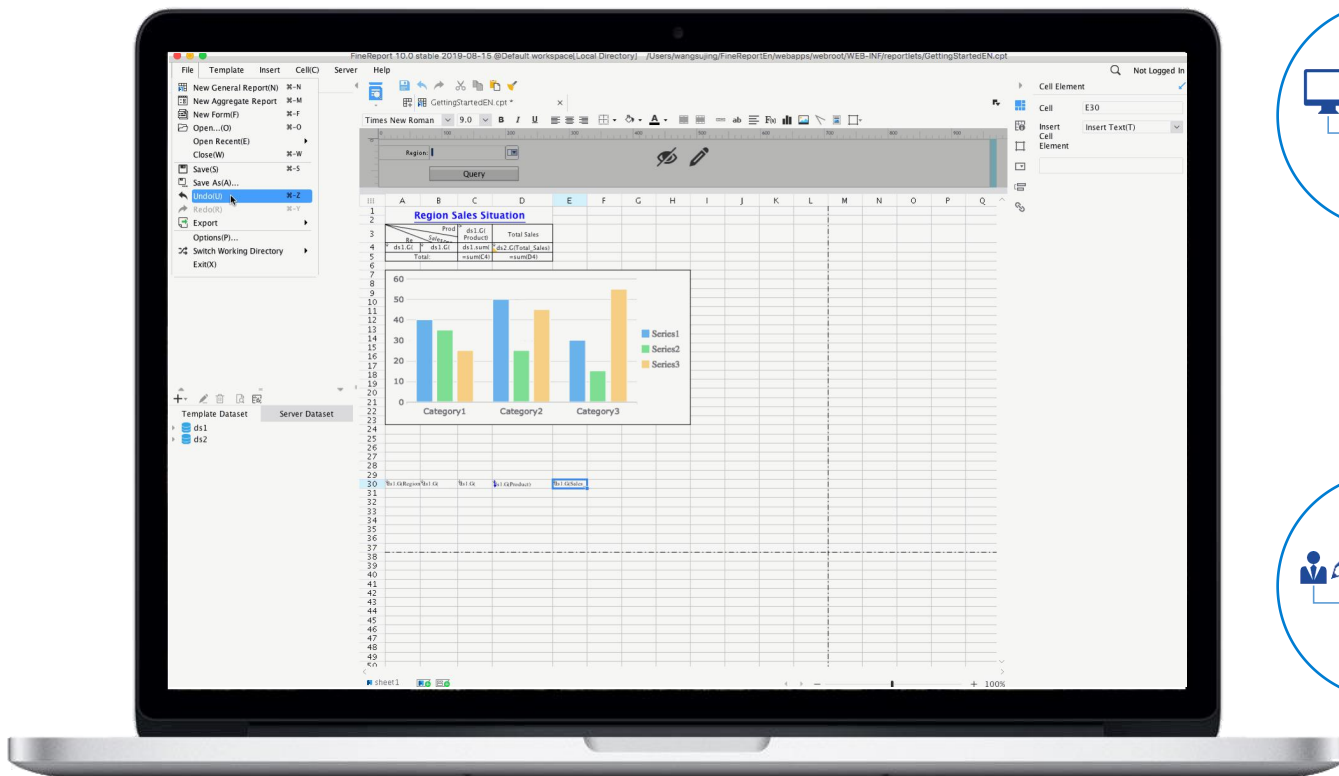

Unlimited expansion along rows and columns.
Cross-sheet calculations are perfectly
compatible with Excel formulas.

3

Support **importing existing Excel sample reports**, and retain the original formulas
without distortion.

2.3 FR Designer Attributes : Switching among Multiple Working Directories, Remote Design, Cooperative Tabulation

Configure Working Directory

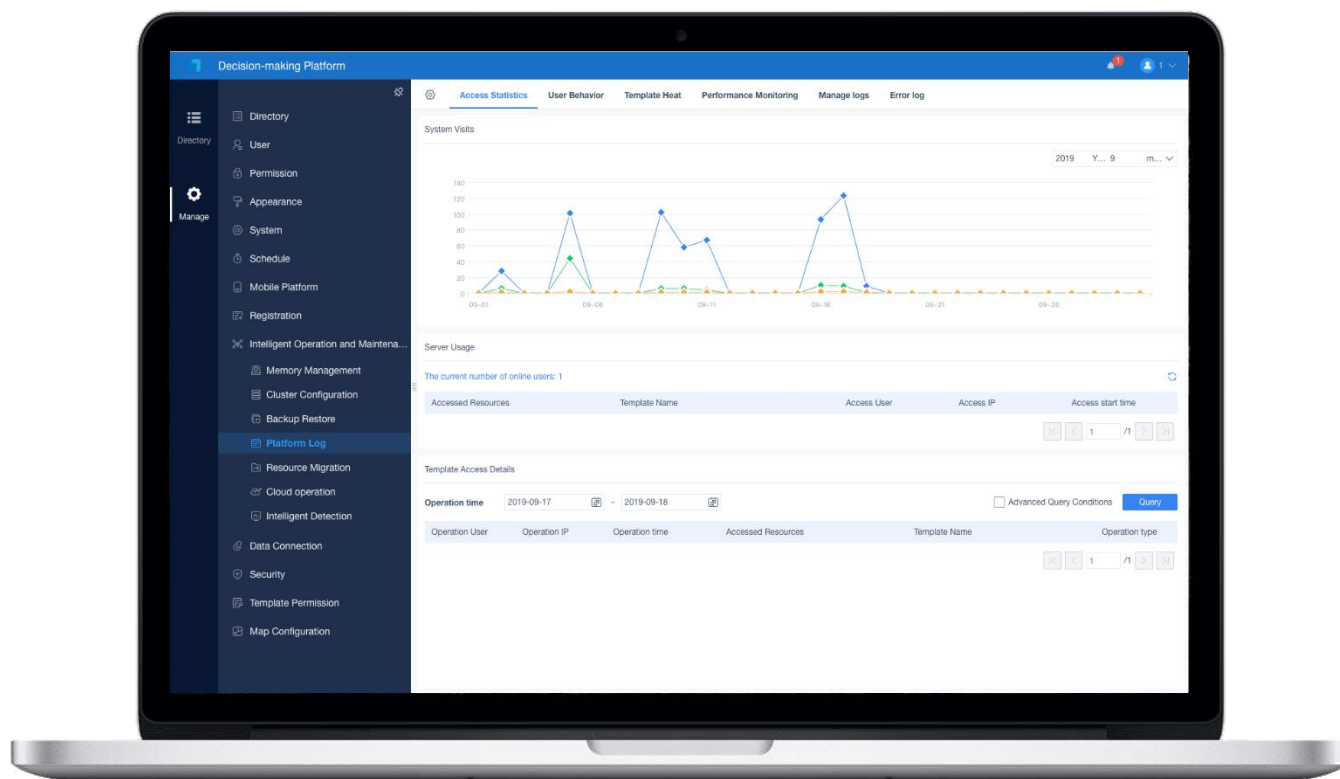

Freely configure multiple working directories and switch between different projects. Support connection to remote servers, local design, and remote publishing.

Support multiple people to develop the same set of reports at the same time. Prevent editing conflicts via the template lock functionality. Ensure data security by data permission control .

2.4 FR Designer Attributes : One-Click Update, Platform Log, Backup and Restore

Platform Log

1

Support online updates, no need to re-install FineReport.
One-click upgrade style to the latest version to meet the newest functionalities.

2

Support automatic backup before upgrading.
Support one-click restoration according to the backup node.

Features of FR Left a Deep Impression on Users

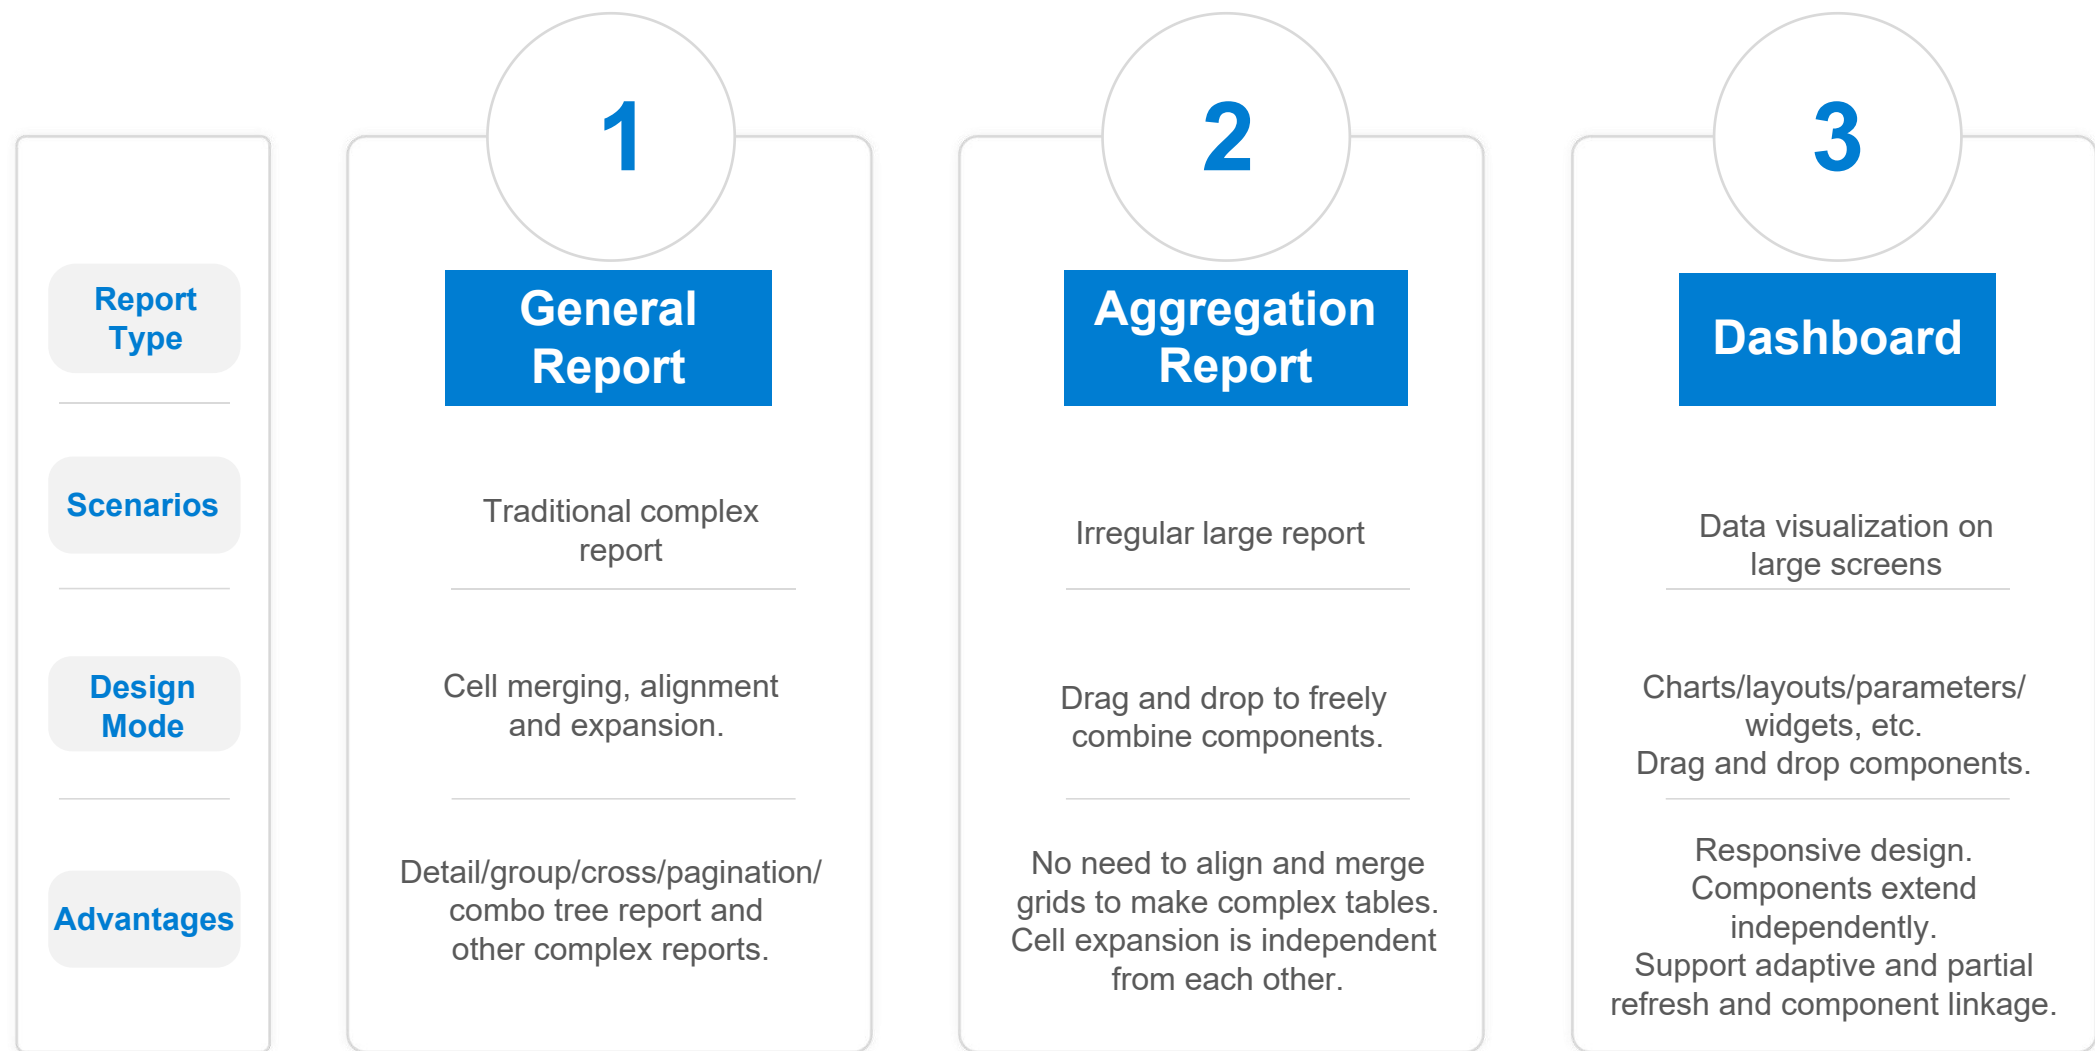

03

...

Reporting Functionalities

3.1 Provides 3 Kinds of Reports to Meet Complex Application Scenarios

3.2 General Report: Pagination, Grouping Effects and Row/Column Split

Pagination Report

1

Pagination:
Freeze header; repeat header or ending;
Aggregate in page; No-pagination preview;
Horizontal non-pagination and vertical pagination.

2

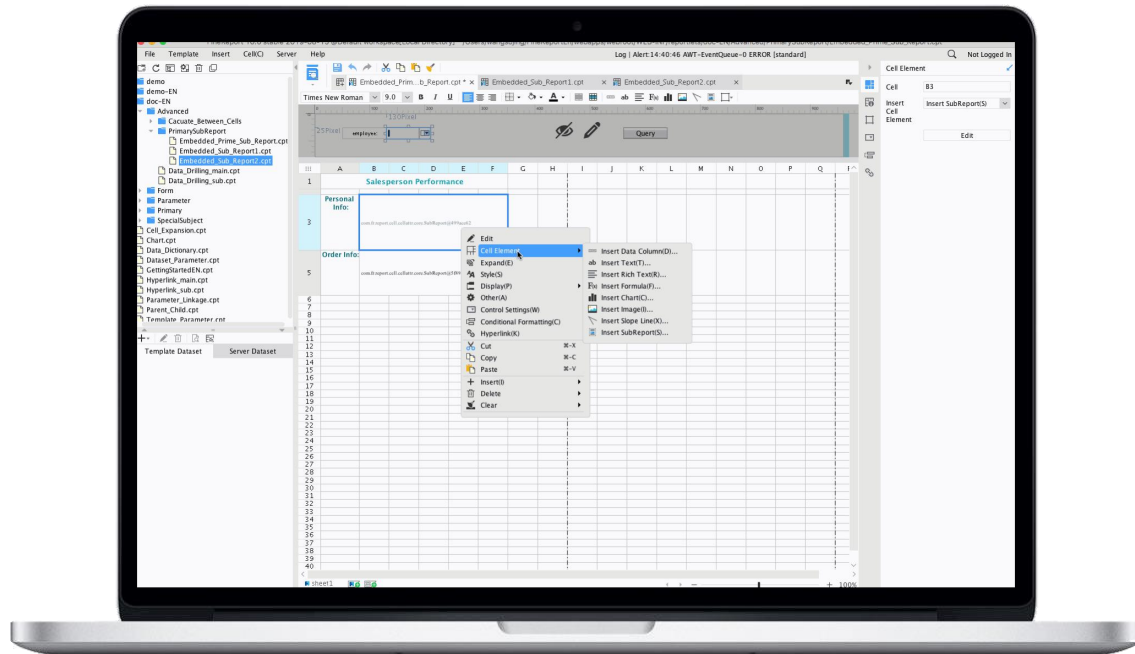

Grouping:
Custom formula for grouping;
Conditional grouping; Ordinary grouping;
Adjacent continuous grouping;
Organization recursive tree;

3

Row/Column split:
Row split; Column split; Card column split;
Duplicate headers;
Automatically fill-in blank rows.

3.3 General Report: Support Various Personalized Report Types as well as Primary-sub Report and Tree Report

Primary-Sub Report

Applicable to reports containing multiple areas that display different content;
FineReport supports embedded and integrated primary-Sub report.

Tree Report

Receivables Summary in Jiangsu Area (Unit:1,000 CNY)

Company / Project / Form	Contracted Sales		Accounts Receivable			Product Cost (not expired)		Subtotal		Already list	
	Number	Amount of money	Number	Contract payment	Receivable	Number	Amount of money	Number	Amount of money	Number	Amount
Nanjing area	320	255000	300	6000	300	200	4000	60	1200		
Wuxi area	1600	128000	300	6000	300	300	6000	20	400		
Suzhou area	1110	53260	500	10000	500	300	6000	80	1600	40	
Changzhou area	870	76150	600	12000	600	300	6000	100	2000	30	
Xuzhou area	1240	62180	100	2000	100	100	2000				
Total	5140	574590	1800	36000	1800	1200	24000	260	5200	70	

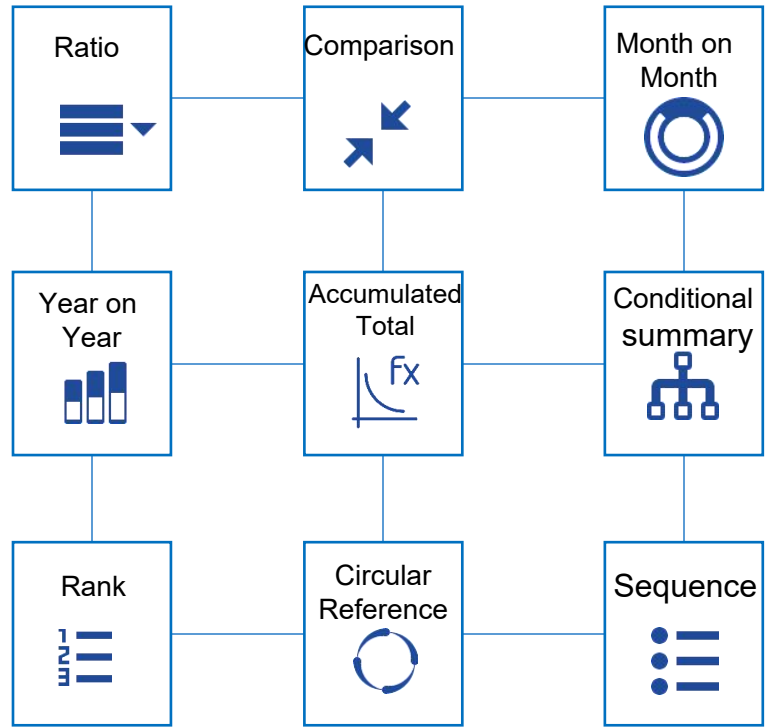

Suitable for displaying data with hierarchical relationships; for instance, data presentation relating to organizational structures can be realized using tree datasets.

3.4 General Report: Dynamic Operations between Cells

YoY and MoM Calculation

*Positioning and referencing the expanded cells to realize operations between cells.

YoY, MoM and Other Financial Statistics									
Year	Month	Sales	MoM	YoY	Proportion	Yearly Ranking	Total Ranking	Yearly Accumulation	Total Accumulation

1 Modules (aggregation blocks) are independent from each other, and enable users to drag, drop and splice.

2 Cell expansion and separation in one module does not affect the operations in other modules.

3.6 Dashboard: Canvas Interface & Component Drag-and-Drop Operations

Dashboard

1

Canvas interface;
Component drag-and-drop operations;
Support within-component refresh
(partial refresh), component hiding, and
component stacking,
Components expand independently.

2

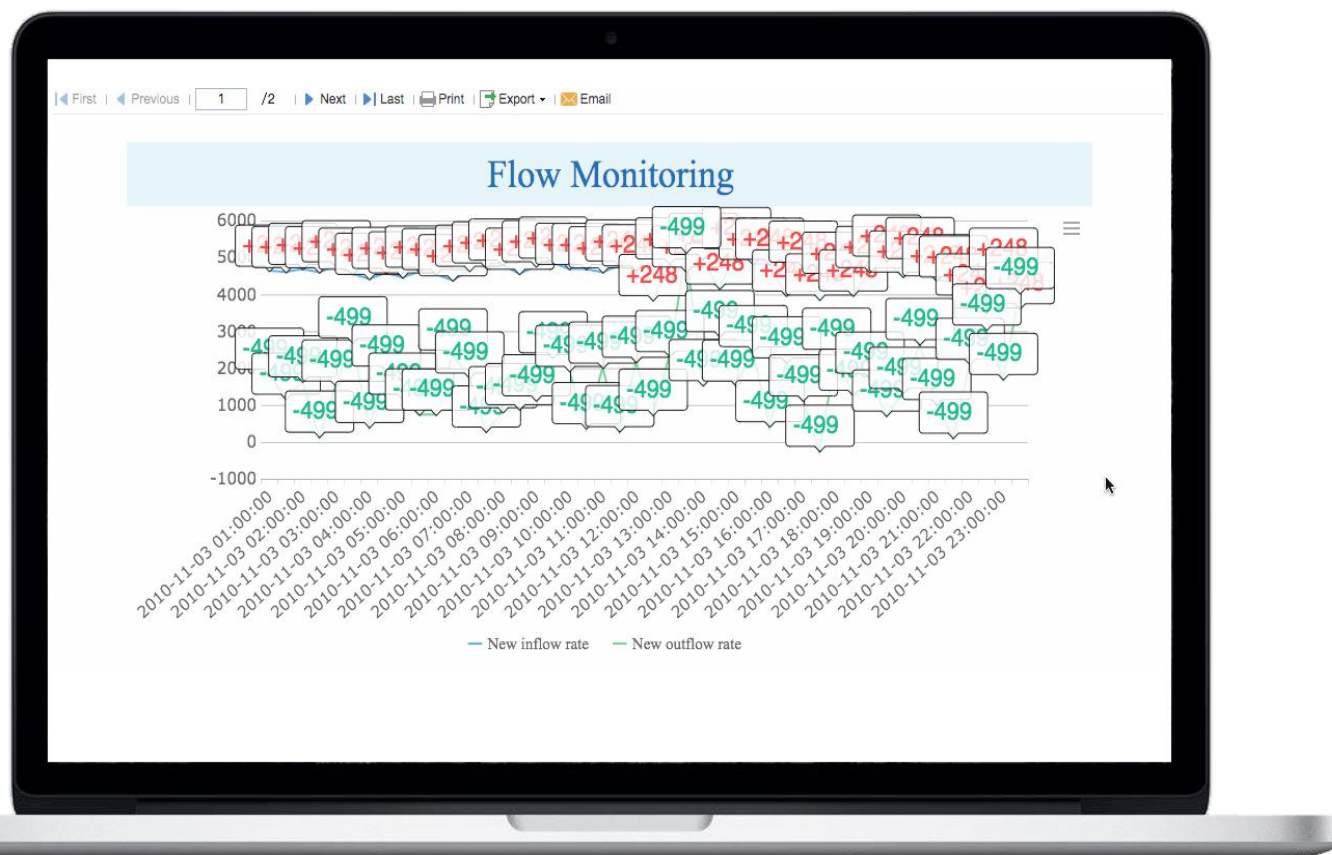

Multiple layout methods:
Adaptive layout, absolute layout, and
tab layout.
Support cross-tab.

3

Provide a variety of components
including
charts, widgets, tables, etc.
Different components can correspond to
different topics and be bound to different
data sources.
Realize a multi-dimensional analytical
management dashboard.

3.7 Dashboard: Real-Time Data Monitoring

Real-time Monitoring

1

Real-time Monitoring:

Data in the back-end is intelligently monitored and compared.

The front-end is updated in time when data change in the back-end, keeping synchronous with the latest data.

2

Local Refresh:

Dashboard supports partial refresh of individual components, so each component has independent monitoring settings.

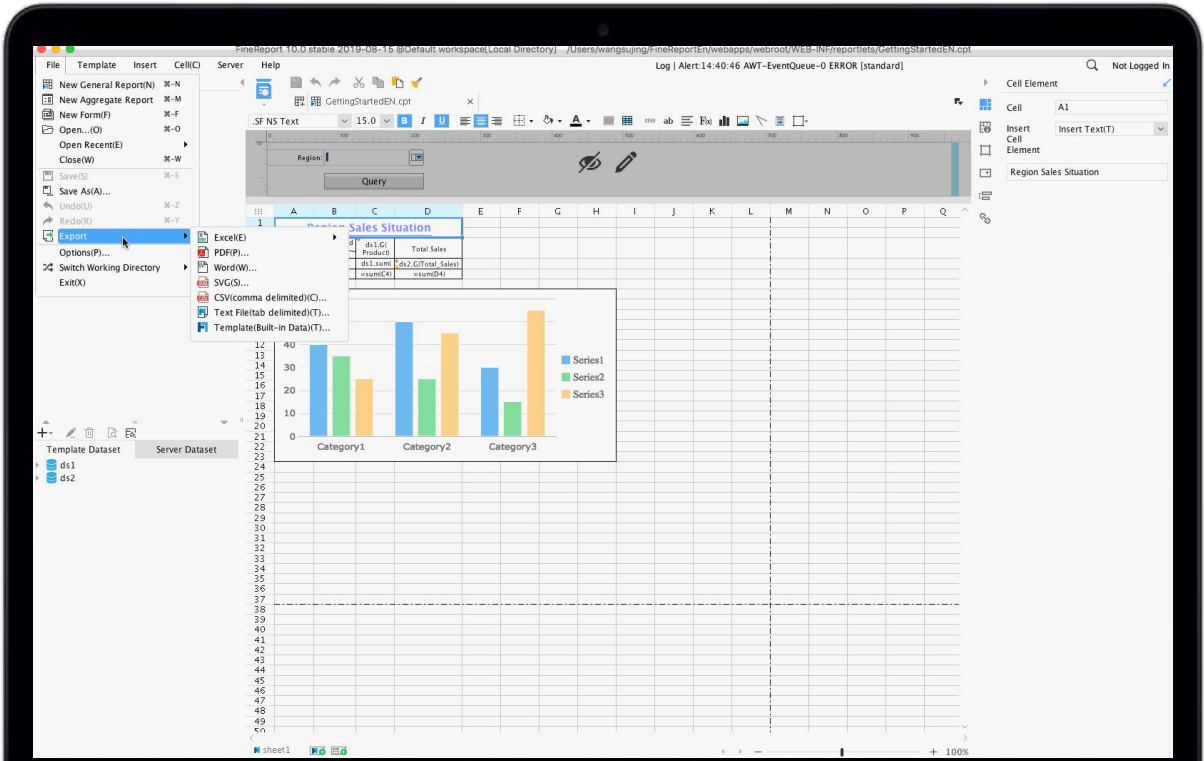

3

Dynamic Prompt:

The chart supports dynamic prompting of updated data when refreshing, such as pop-up the changed values.

3.8 Report Export: Multiple Export Options, Perfect Export from Designer & Browser

Export Settings

Export Types:

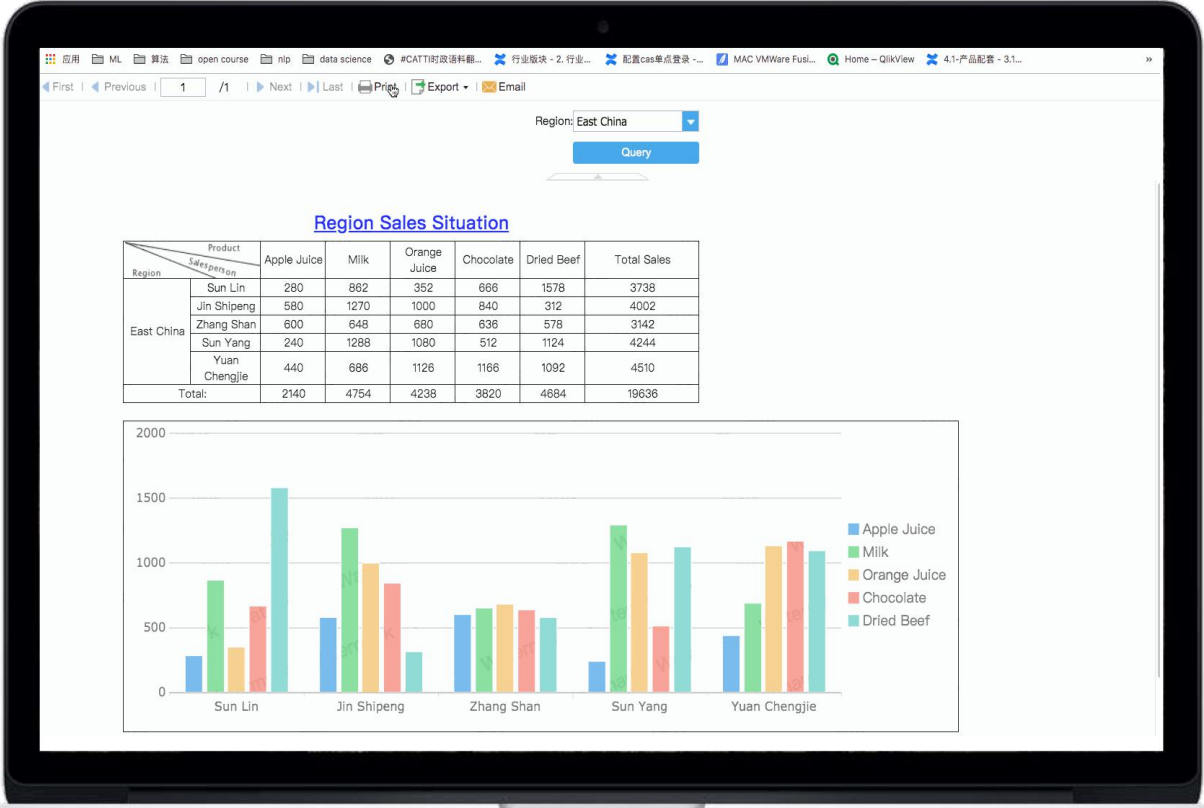

Features:

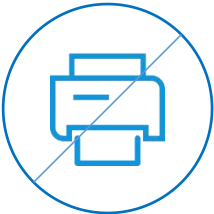

3.9 Report Printing: Multiple Print Options to Meet Daily Business Needs

Print Settings

Print Types:

Zero-client
print

Local software
print

Features:

Silent

1

One of the best design parameter interface in BI industry. Drag-and-drop widgets, and free-layout query interfaces.

2

Provides more than 10 kinds of widgets such as text, drop-down tree, drop-down checkbox, time, date and drop-down box.

3

Binding widgets with parameters to control and filter report contents and styles.

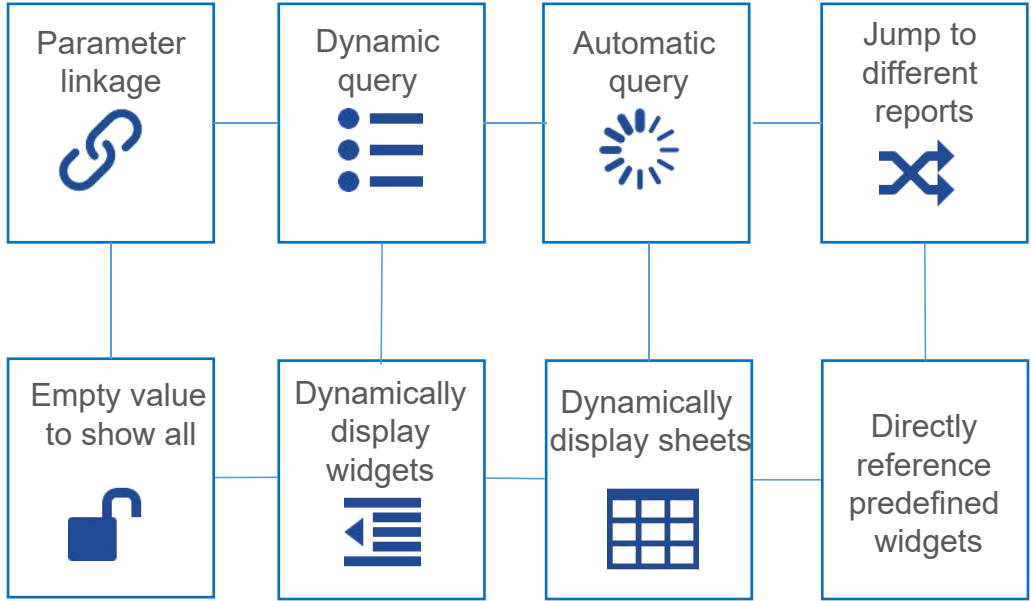

4.2 Provide a Variety of Custom Settings to Achieve Advanced Filtering and Query

Advanced Parameter Query

☐ Manual query ☒ Automatic query

4.3 Parameter Passing to Easily Perform Linkage and Drilling among Reports and Components

Linkage

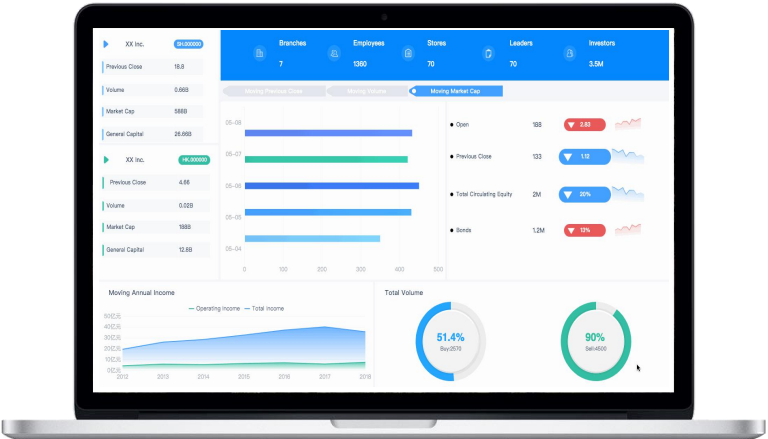

1

Support linkage analysis between diagrams and diagrams, diagrams and tables, and tables and tables.

2

Support drilling between different types of charts; Support drilling to unlimited layers or dimensions.

Multi-dimensional Analysis

Multi-dimensional Drilling

The table on the laptop shows a list of orders with columns: Order_ID, Order_Date, Customer name, Responsible ID, Paid or not, and Export Details. The table is scrollable, demonstrating multi-dimensional drilling.

Order_ID	Order_Date	Customer name	Responsible ID	Paid or not	Export Details
1001	2010-09-04	RICAR	14	Yes	Export
1002	2010-09-04	LILAS	17	No	Export
10297	2010-09-04	BLONP	5	Yes	Export
10300	2010-09-09	MAGAA	2	No	Export
10308	2010-09-18	ANATR	10	No	Export
10319	2010-10-02	TORTU	7	No	Export
10324	2010-10-09	KOENE	1	Yes	Export
10326	2010-10-10	BOLID	4	Yes	Export
10328	2010-11-18	WANDK	6	Yes	Export
10366	2010-11-28	GALED	19	Yes	Export
10384	2010-12-16	BERGS	3	No	Export
10396	2010-12-27	FRANK	1	Yes	Export
10414	2011-01-14	FAMIA	2	Yes	Export
10426	2011-01-27	GALED	4	Yes	Export
10442	2011-02-11	ERNSH	24	Yes	Export
10456	2011-02-25	KOENE	8	Yes	Export
10473	2011-03-13	ISLAT	1	Yes	Export
10500	2011-04-09	LAMAI	17	Yes	Export
10514	2011-04-24	HUNGO	2	Yes	Export
10529	2011-05-07	MAISD	5	Yes	Export

3

Support tab switching, multi-dimensional analysis, and multi-dimensional data observation.

4.4 Secondary Analysis: Real-time Data Analysis after Regular Parameter Query

Secondary data filtering and sorting

1

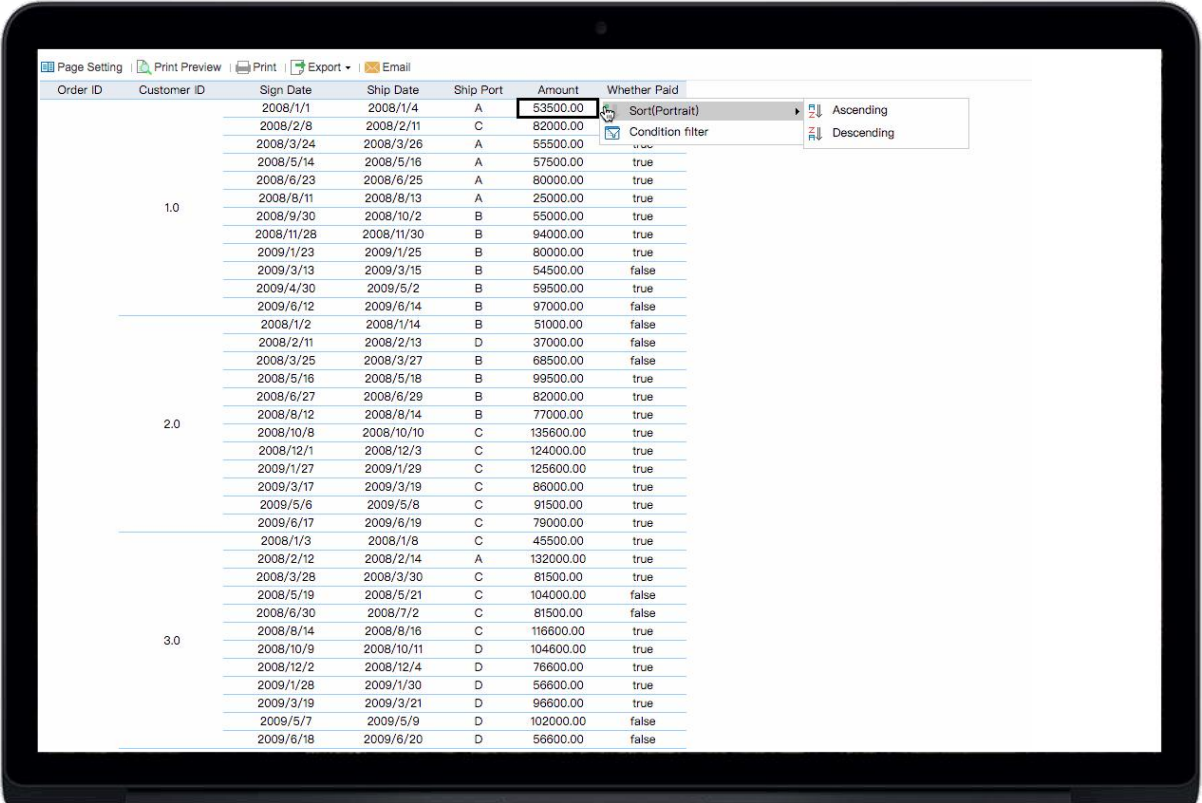

Usually, after using common parameters to query the result report, the data of the current page can no longer be used for in-depth analysis.

2

FineReport provides page-level real-time data analysis to solve the above problems.

3

Support sorting, conditional filtering, and list filtering.

The screenshot shows a web application interface for data analysis. At the top, there are tabs for 'Page Setting', 'Print Preview', 'Print', 'Export', and 'Email'. Below these is a table with columns: Order ID, Customer ID, Sign Date, Ship Date, Ship Port, Amount, and Whether Paid. The table is divided into three sections labeled 1.0, 2.0, and 3.0. A context menu is open over the 'Amount' column, showing options for 'Sort(Portrait)' (with 'Ascending' and 'Descending' sub-options) and 'Condition filter'.

Order ID	Customer ID	Sign Date	Ship Date	Ship Port	Amount	Whether Paid
		2008/1/1	2008/1/4	A	53500.00	
		2008/2/8	2008/2/11	C	82000.00	
		2008/3/24	2008/3/26	A	55500.00	
		2008/5/14	2008/5/16	A	57500.00	true
		2008/6/23	2008/6/25	A	80000.00	true
		2008/8/11	2008/8/13	A	25000.00	true
		2008/9/30	2008/10/2	B	55000.00	true
		2008/11/28	2008/11/30	B	94000.00	true
		2009/1/23	2009/1/25	B	80000.00	true
		2009/3/13	2009/3/15	B	54500.00	false
		2009/4/30	2009/5/2	B	59500.00	true
		2009/6/12	2009/6/14	B	97000.00	false
		2008/1/2	2008/1/14	B	51000.00	false
		2008/2/11	2008/2/13	D	37000.00	false
		2008/3/25	2008/3/27	B	68500.00	false
		2008/5/16	2008/5/18	B	99500.00	true
		2008/6/27	2008/6/29	B	82000.00	true
		2008/8/12	2008/8/14	B	77000.00	true
		2008/10/8	2008/10/10	C	135600.00	true
		2008/12/1	2008/12/3	C	124000.00	true
		2009/1/27	2009/1/29	C	125600.00	true
		2009/3/17	2009/3/19	C	86000.00	true
		2009/5/6	2009/5/8	C	91500.00	true
		2009/6/17	2009/6/19	C	79000.00	true
		2008/1/3	2008/1/8	C	45500.00	true
		2008/2/12	2008/2/14	A	132000.00	true
		2008/3/28	2008/3/30	C	81500.00	true
		2008/5/19	2008/5/21	C	104000.00	false
		2008/6/30	2008/7/2	C	81500.00	false
		2008/8/14	2008/8/16	C	116600.00	true
		2008/10/9	2008/10/11	D	104600.00	true
		2008/12/2	2008/12/4	D	76600.00	true
		2009/1/28	2009/1/30	D	56600.00	true
		2009/3/19	2009/3/21	D	96600.00	true
		2009/5/7	2009/5/9	D	102000.00	false
		2009/6/18	2009/6/20	D	56600.00	false

Charts

5.1 FineReport Chart Solution: Self-developed, Open Interface

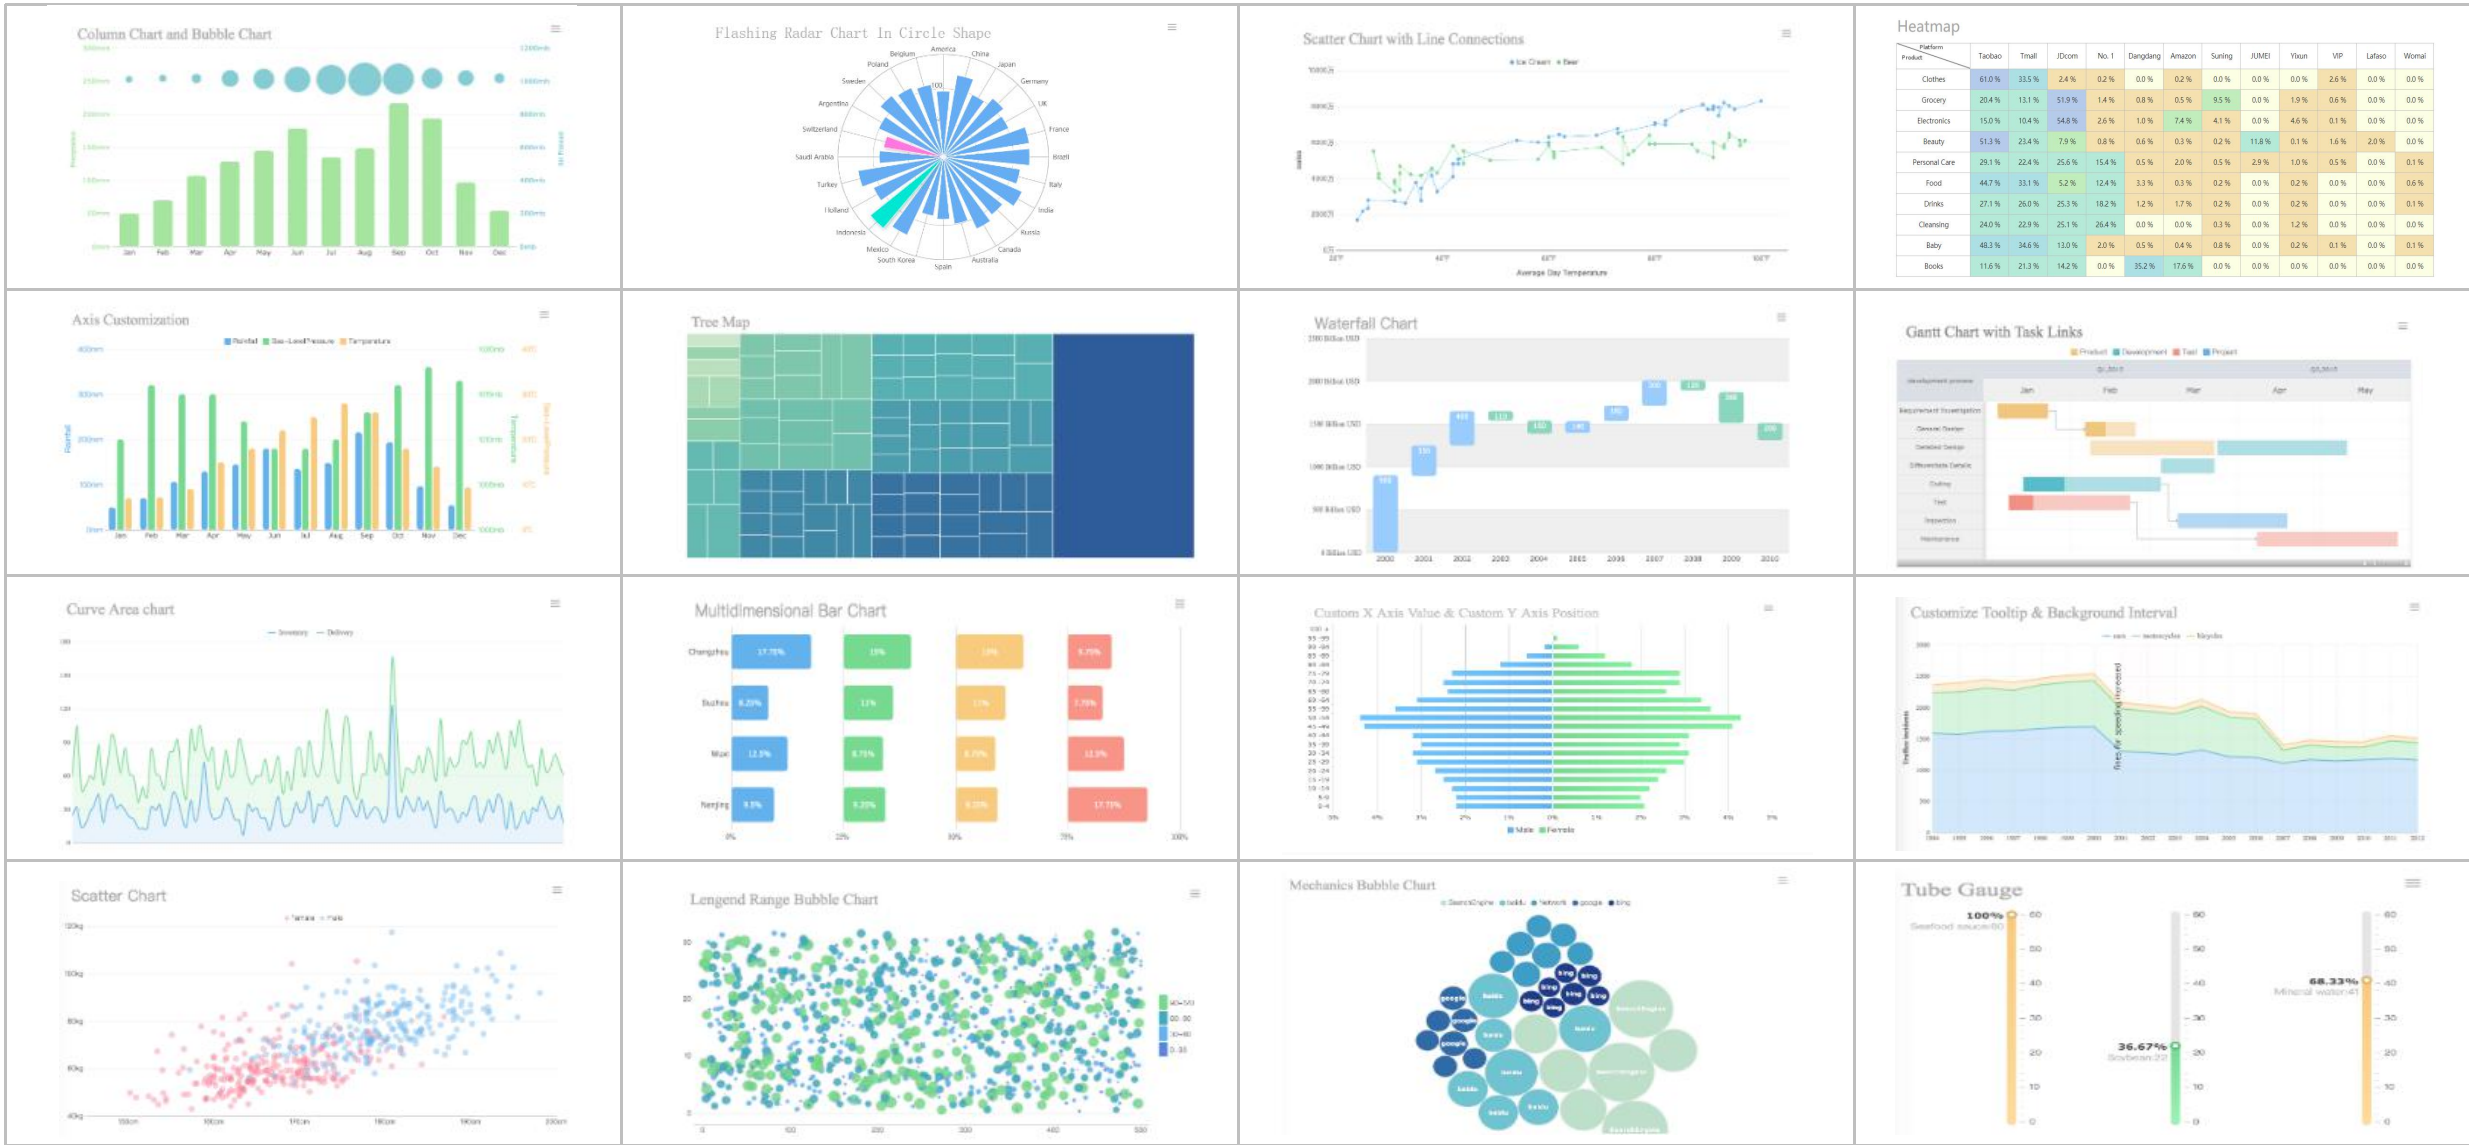

Independent development of HTML5 charts, along with excellent dynamic effects and powerful interactive experience; Providing powerful personalized settings, and can be displayed in a variety of terminal devices.

Novel charts developed based on WebGL. The cool dynamic effects can meet the display and playback needs under special scenarios such as large screens.

Provide a complete interface. Users can introduce third-party chart widgets such as ECharts.

5.2 Self-developed HTML5 Charts to Satisfy Reading Preferences of Different Groups

5.3 Multiple Data Map Types: Combination Map / Custom Map

Combination Map

- 1 Support freely combining point maps and area maps to present data
- 2 Support bubble chart, pie chart, scatter, locator, etc. to combine with area map

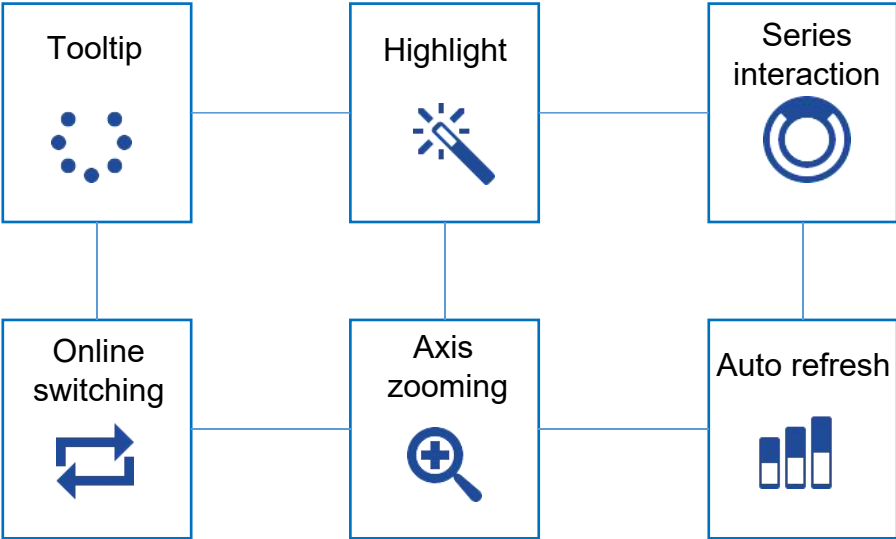

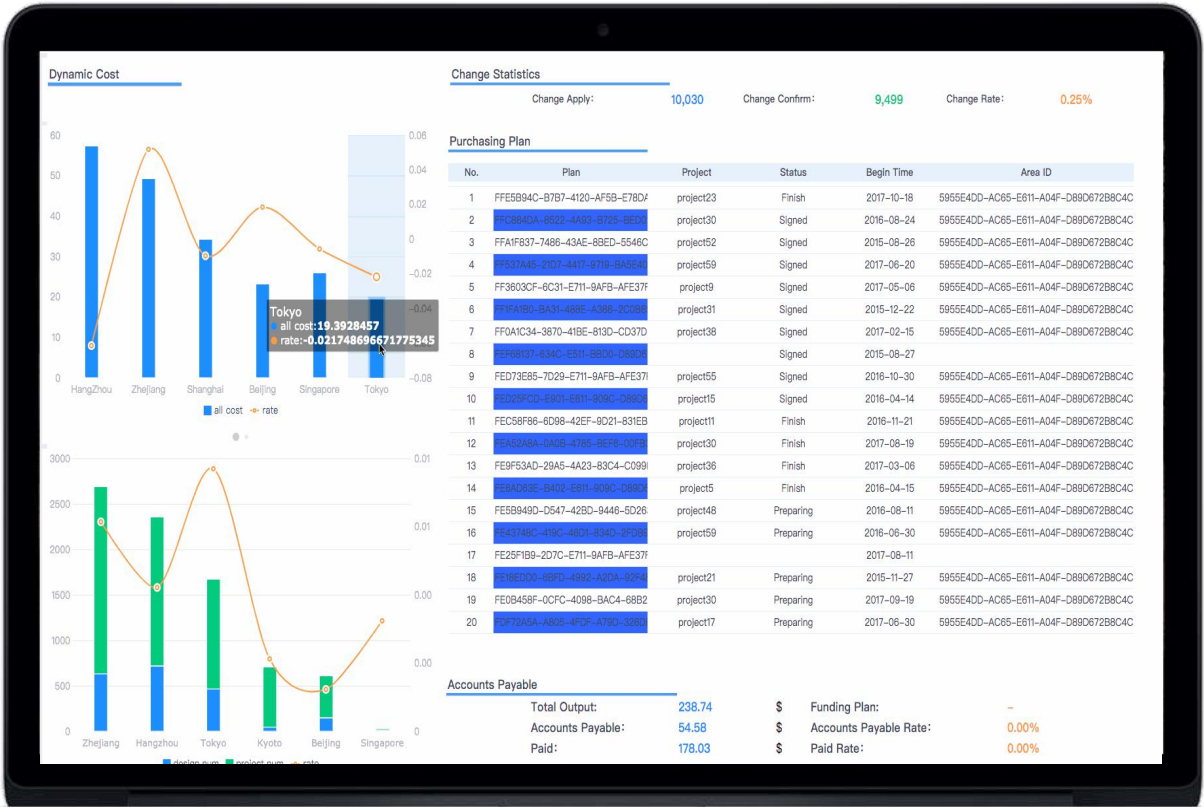

Custom Map

- 1 Support importing images and outlining custom maps
- 2 Support direct interaction with partitioned images through data point hints

5.4 Chart Interaction: Rich Interactive Effects and Powerful Visual Experience

Dynamic Interaction

Lister:

Data:

U.S. dollar

Description:

1.Multi-source data entry:
The two pieces of data in the report are binded to different database tables, so the inputed data will be submitted to corresponding data tables.

2.Addition, deletion and modification
Detailed data in the lower part of the report can be added or deleted through the button on the right.

3.Off-line Filling
Click the "Input offline html" button on the toolbar to output the CPT report as html, and you can edit the offline report locally. The report can be filled in when the network is disconnected, and the entered data will be submitted after connecting to the network.

6.2 Smart Data Submission Control

4 types of built-in submission

Built-in smart submission, insert submission, delete submission, update submission, etc. You can set cells not to participate in the submission if they are not edited.

Support custom submission

Support custom Java class submission.

Smart binding fields with cells

Intelligently add fields, intelligently add cells, and quickly bind fields with respective cells.

Submission conditions & events

Support the submission criteria, only the data that meets the preset conditions will be stored in the database. Support editing submission events.

6.3 Data Validation: Ensure Data Meet Specifications

Typical Data Validation

The screenshot shows a 'Registration Form' with a toolbar at the top containing 'Submit', 'Data validation 3', 'Print', 'Export', 'Email', and 'Add Record'. A validation error message box is displayed over the 'ID Number' field, stating: 'Input name!', 'ID cannot be null!', and 'Please input phone number!'. The form fields are organized into a table-like structure with the following labels: Name, Nation, Height (cm), ID Number, School, Contact Address, Email, Language, Graduation Date, Education Experience, Gender, Political Status, Weight (kg), Birth Date, Birthplace, Health, Education, Major, Zip Code, Phone, Computer Level, Job, Level, and Arrival Date. The 'Date' field at the top right is set to '2019-09-05'.

FineReport Data Validation

Timely validation

Validate the contents of the cell at the time when they are edited. Criteria include the length of the text and the precision of numbers.

Submit validation

Global data validation at submission time; Support formulas/custom Java classes.

JS validation

Support writing JavaScript events to implement complex data validation.

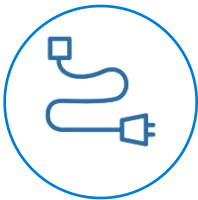

Mandatory submit

Can force the data to be submitted even though they do not pass validation.

6.5 Data Entry Cache: Intelligent Cache Technology to Avoid Accidental Loss of Data

Cache Tool

Scenarios:

Network interruption;
Server emergency

Content to be determined
need reconsider before submission

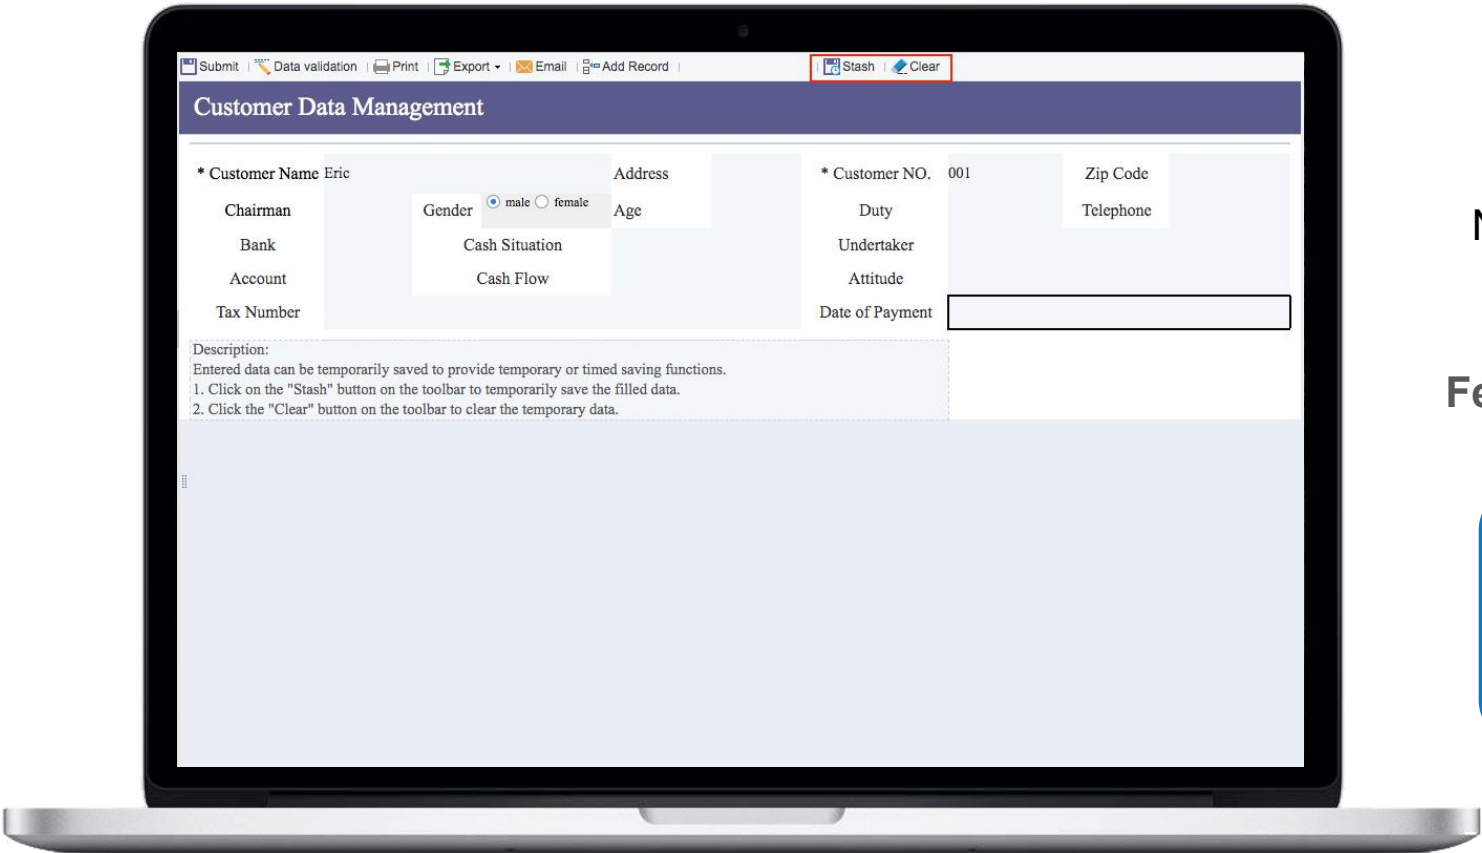

Features:

Cache
by user

Clear
cache

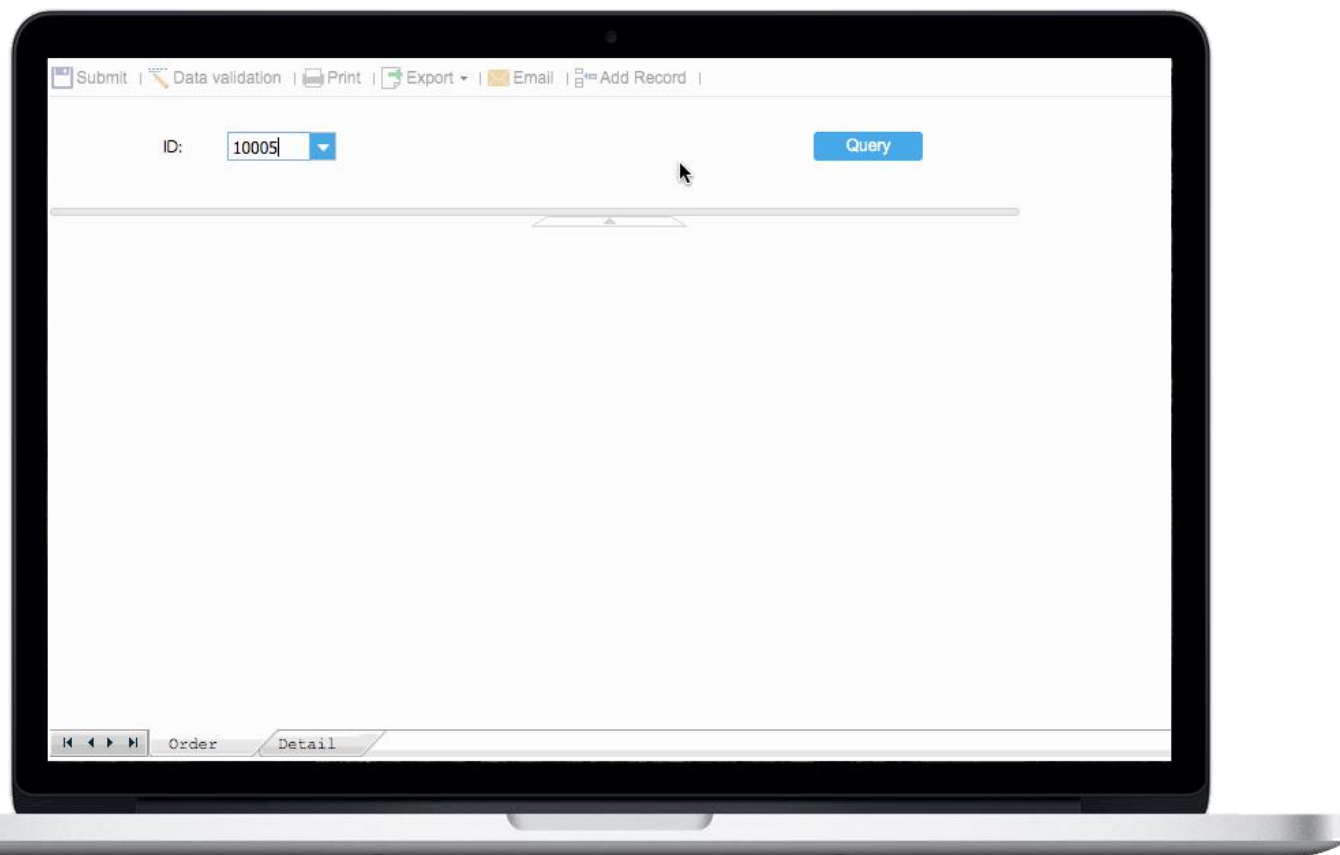

Automatic
cache

Manual
cache

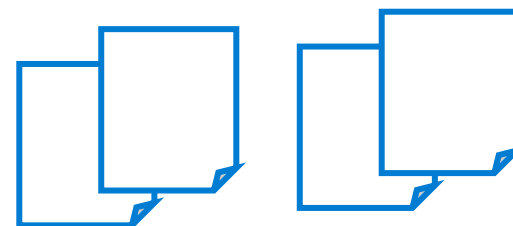

6.6 Multi-sheet Data Entry: Support Report Batch Submission

Multi-sheet Data Entry

Scenarios:

A form contains multiple units of data that correspond to different topics.

Features:

Cross-sheet calculation

Independent validation of each sheet

Submit the current sheet or all sheets.

Different sheets can be submitted to different databases or tables.

Once submitted, validate all sheets at one time.

6.7 Multi-level Reporting: Well-organized Processes of Form Submission, Approval to Return

Multi-level Reporting Settings

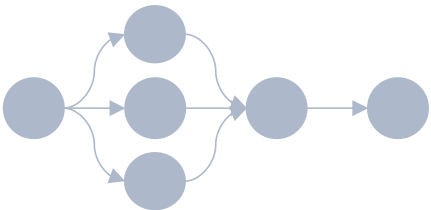

1

Support Multiple processes

2

Support rich ways of reminding

The screenshot shows a web application interface for adding a process. The main window has a header with 'Add' and 'Refresh' buttons. Below the header is a table with columns: 'The process I created', 'Created by', 'Institutional Department', and 'Create Time'. A modal dialog titled 'Add process' is open, showing a form with various fields and tabs. The 'Task list' tab is active, showing buttons for 'Report', 'Audit', 'Deliver', 'Close', and 'View'. The 'Page Report' tab is also visible, showing buttons for 'Remarks', 'Task Flow View', 'Save', 'Pass', 'Return', and 'Report'. The 'Parameter Settings' section includes a table with columns 'Name', 'Type', and 'Value'. The 'Operator' row shows 'User' and 'Select Platform User'. The 'Alarm Settings' section includes a checkbox for 'Node flow after completion' and a dropdown for 'Email Alert'.

Design reporting process

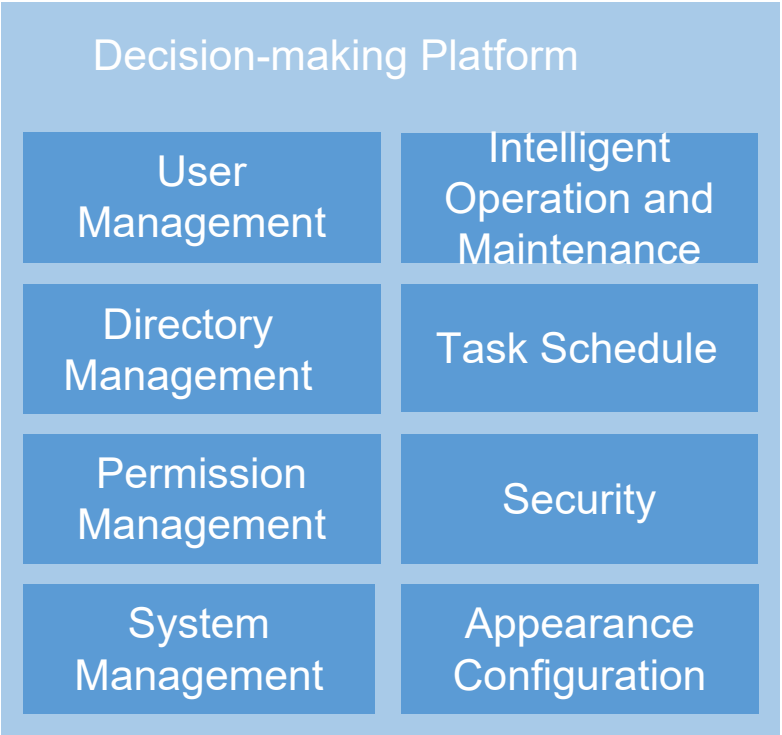

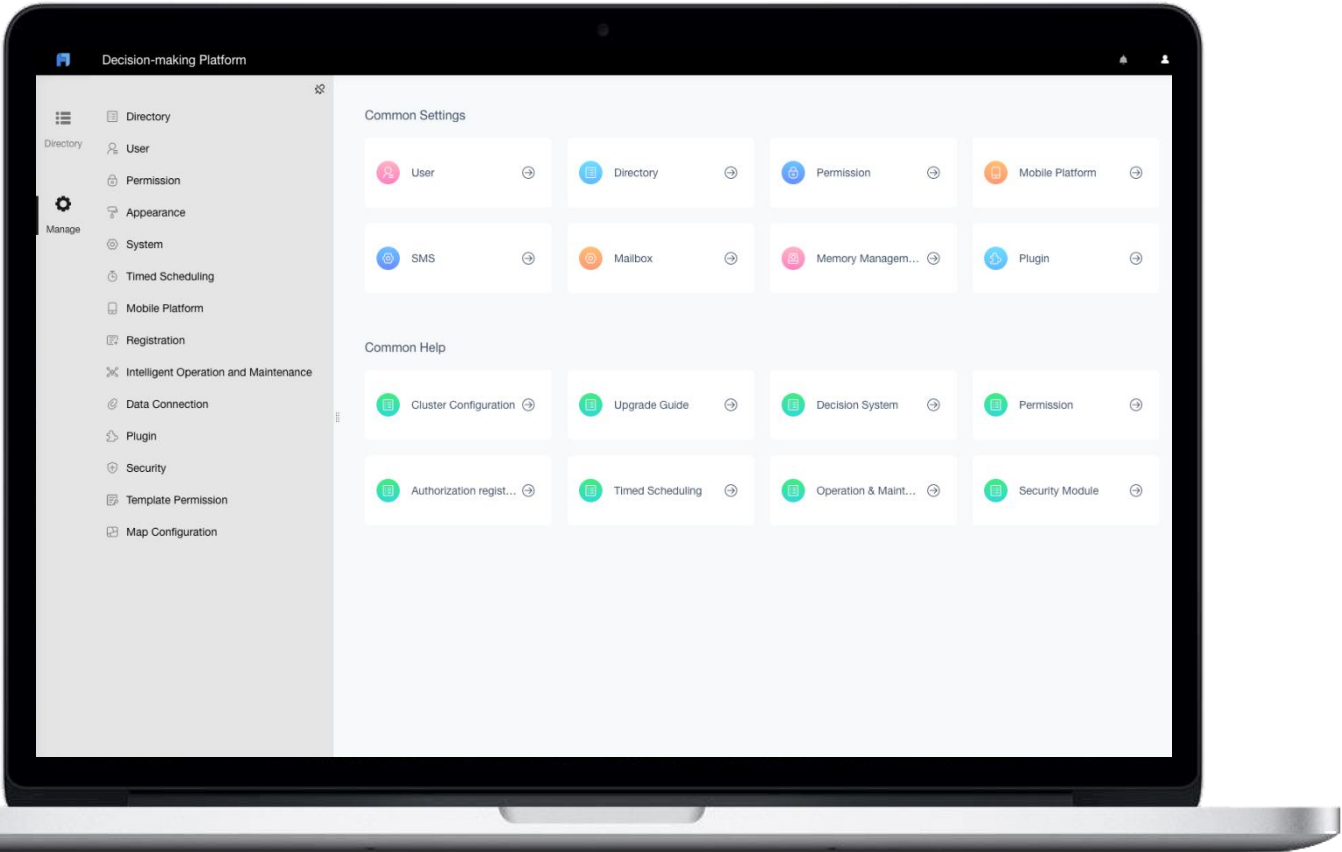

07

...

Decision-making
Platform

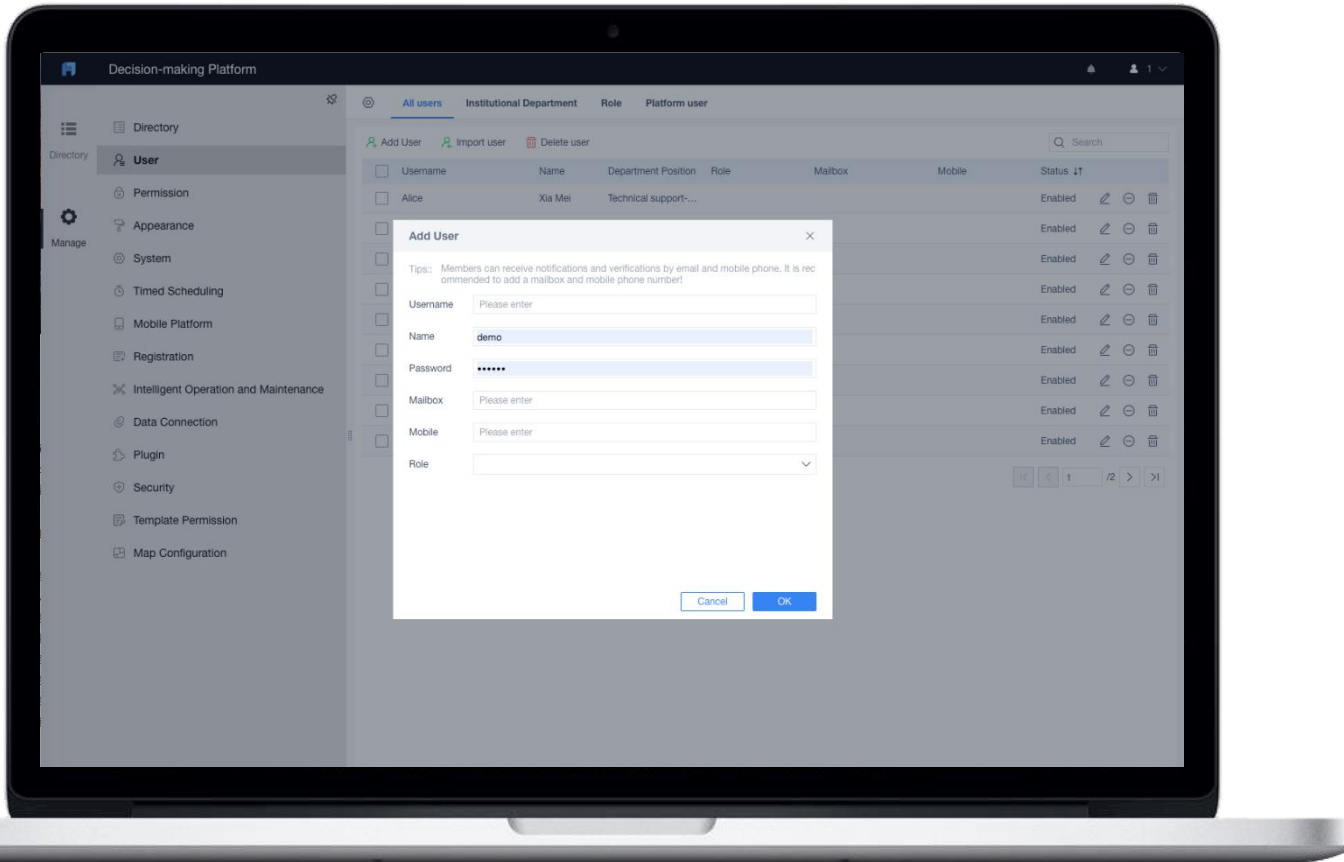

7.1 Decision-making Platform: Unified Management of Reports, Users and System Configuration

Platform Interface

7.2 User Management: Built-in Users, Import Users, Synchronize User Data & User Authentication

User Management

1

Users adding

Support manually adding/importing users and synchronizing user datasets in batches to add users and their positions and roles.

2

Departments and roles

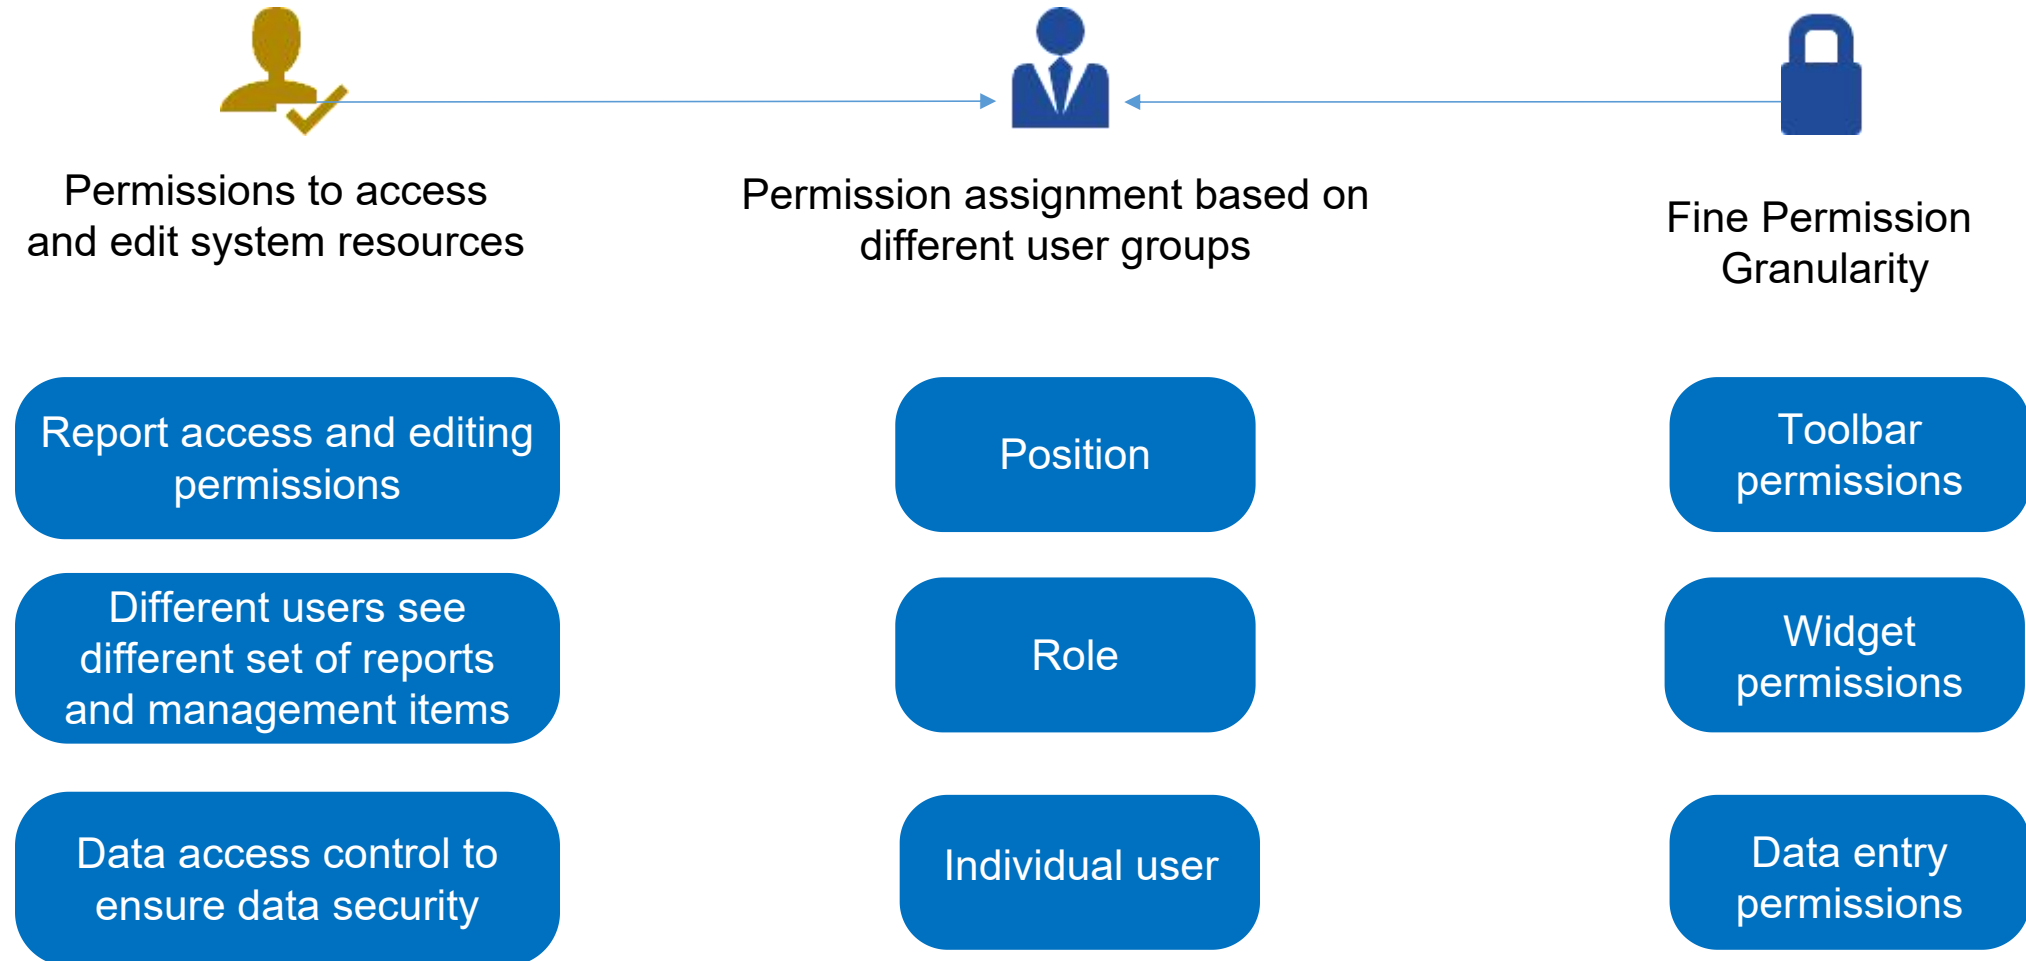

Users can be classified and managed according to organizational structure and roles.

3

User authentication

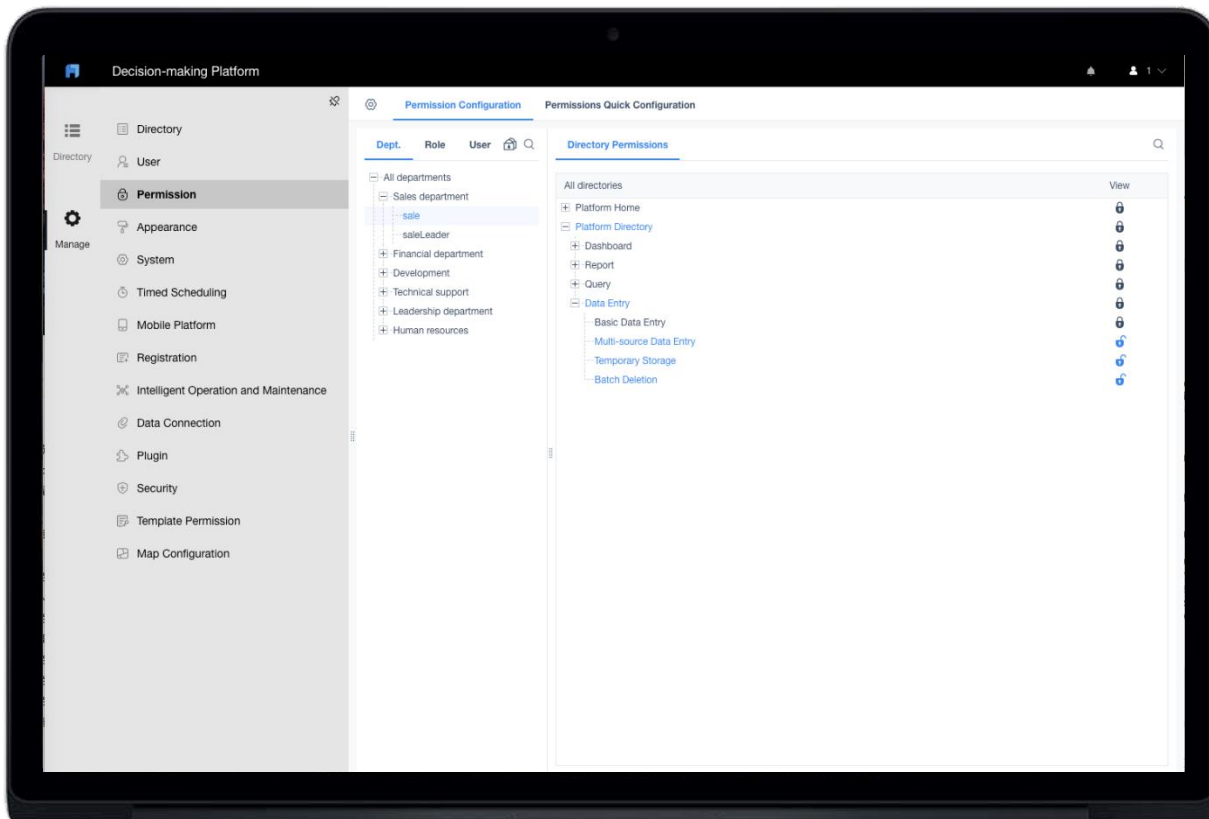

Provide built-in authentication, LDAP authentication, and HTTP authentication. The 3 user authentication methods can be combined with any system platform.

7.3 Authority Management: Visible Configuration Process, Fine Permission Granularity

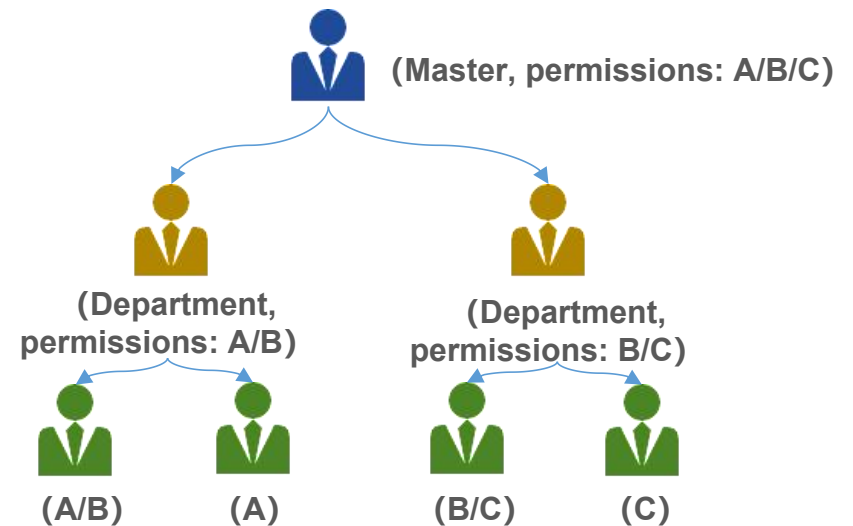

7.4 Hierarchical Authorization: Layered Authority Assignment

Hierarchical Authority Management

Hierarchy

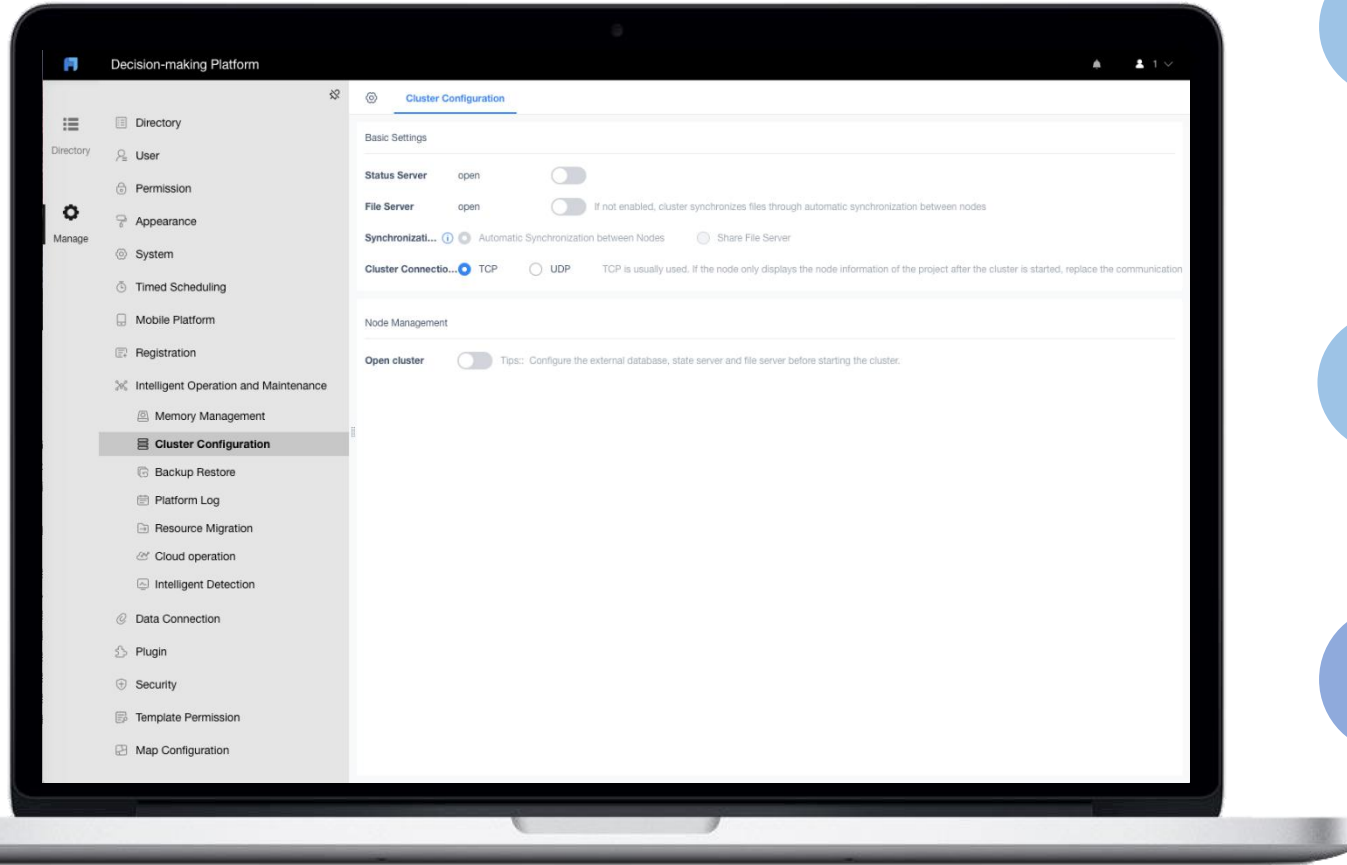

Core Value:

Through hierarchical authority management, different subsidiary companies/departments can share the same systems. Each subsidiary company/department has its own administrator and assigns authority to its subordinate employees. The super administrator controls all the permissions, and the subordinate administrator can only manage users and report templates within their own authority.

7.5 Intelligent Operation and Maintenance: Memory Management, Cluster Configuration, Backup and Restore

Intelligent O&M

1

Memory Management:

Real-time monitoring and alerting including memory and CPU utilization. Support intelligent control of the survival, cleanup, and life cycle of sessions. Support constraints on data size in a single template and the execution time of SQL to ensure stable operation of the server.

2

Cluster Configuration:

Quickly configure the cluster environment via simple operations. Support configuration of state servers and file servers in the platform, and support hot deployment of adding/dropping nodes.

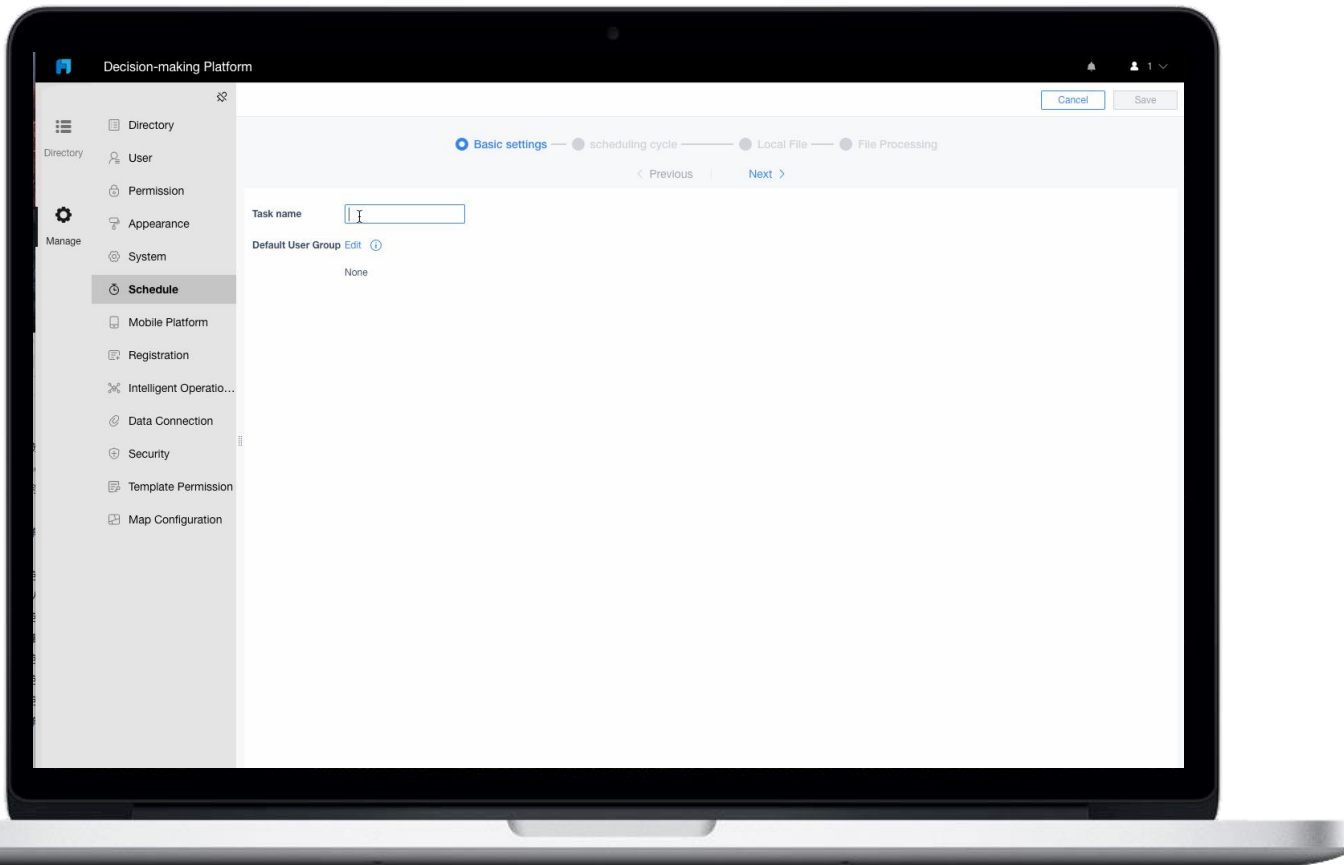

3

Backup and Restore:

Support backup and restore of system configuration information, templates, jars, etc. Support setting backup and restore frequency, backup path and backup quantity, and space occupation, etc.

7.6 Task Schedule: Trigger Tasks Automatically Based on Conditions

Task Schedule

1

Perform specific tasks corresponding to preset cycle frequency/condition. Efficiently implement tasks such as daily, monthly, quarterly, and annual reports.

2

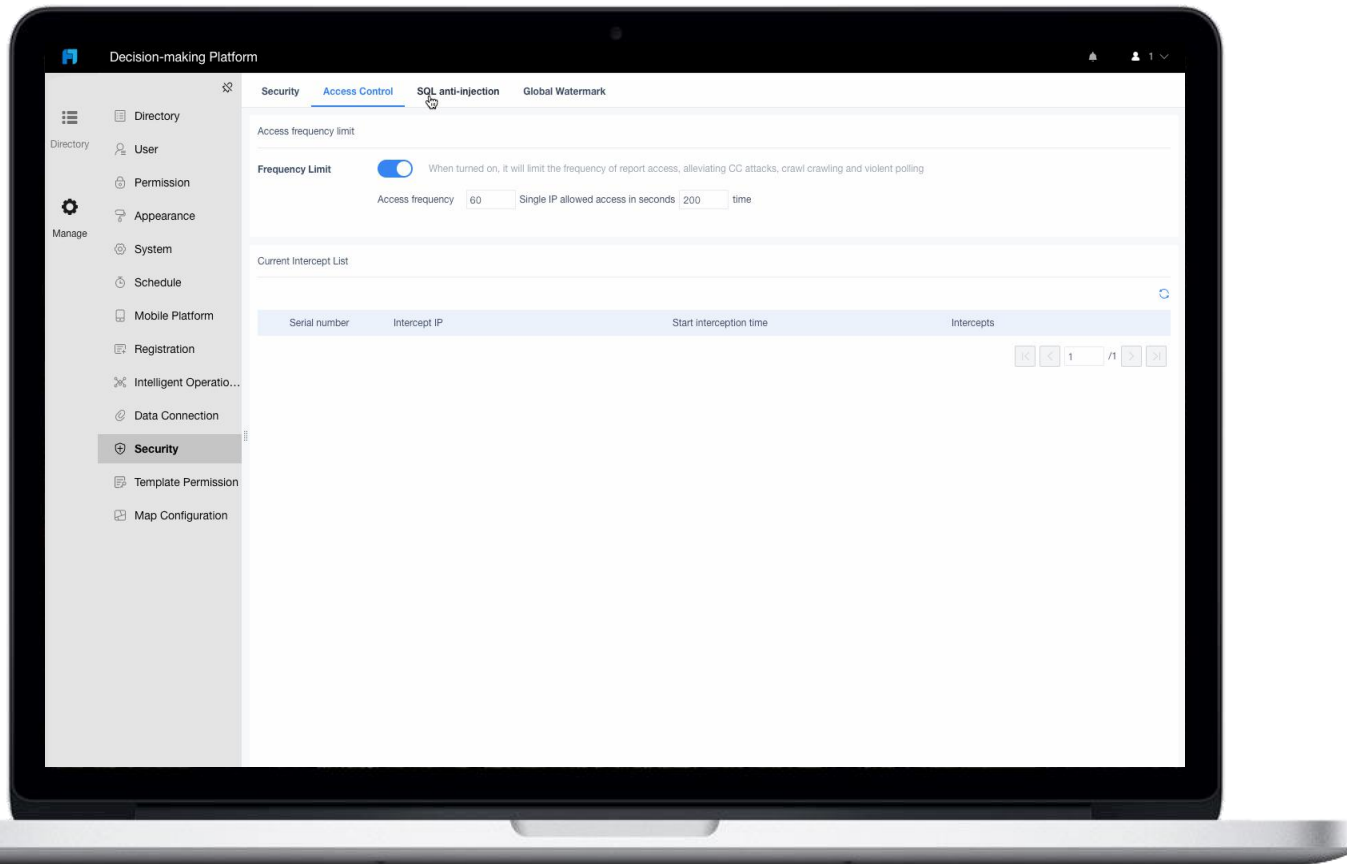

The result files generated by the scheduled task can be saved in the specified directory, FTP or as an attachment for email reminder. SMS notifications, platform message notifications, and pushing to mobile terminals are also available.

3

Centralized management of scheduled tasks, including viewing task running status, pausing, editing and copying, etc. Support schedule task permission control to generate different results for different users, roles or positions.

7.7 Safety Management: Comprehensively Improve Enterprise Information Security

Safety Management

1

Security Protection:

Include cookie enhancement, file upload verification, and Security Header. It can reduce the threat of uploading malicious files, cross-site scripts and other attacks.

2

Access Control:

Mitigate CC attacks, web crawling and brute-force cracking by limiting the frequency of report access.

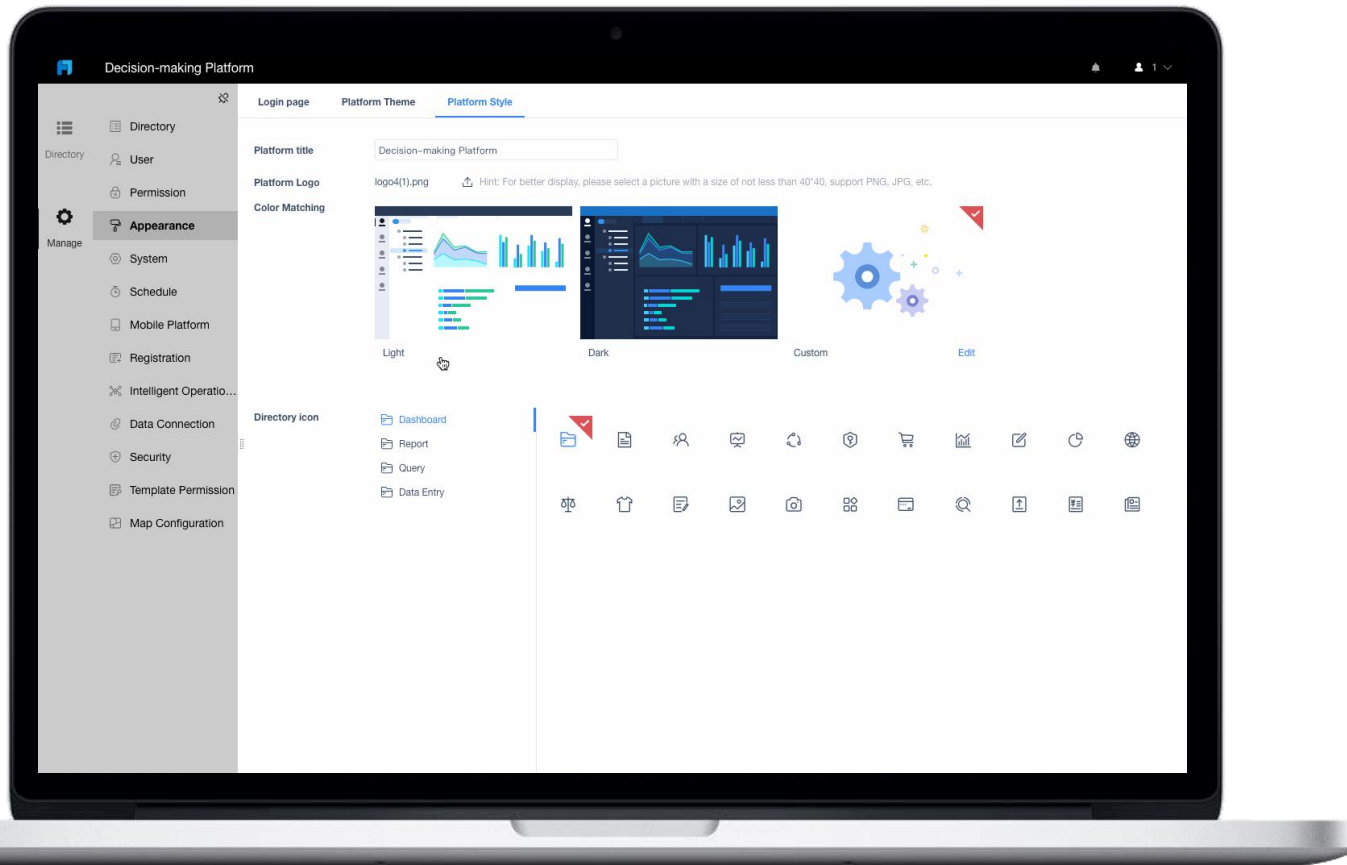

3

SQL Anti-Injection:

Users can prevent the injection of malicious parameters by disabling special keywords and character escaping.

7.8 Platform Appearance Configuration: Custom Login Page, Background, Theme, etc.

Appearance Setting

Quick configuration selection:

Login
page

Theme
Options

Template
Style

Open API for custom themes:

Overall
style

Interactio
n style

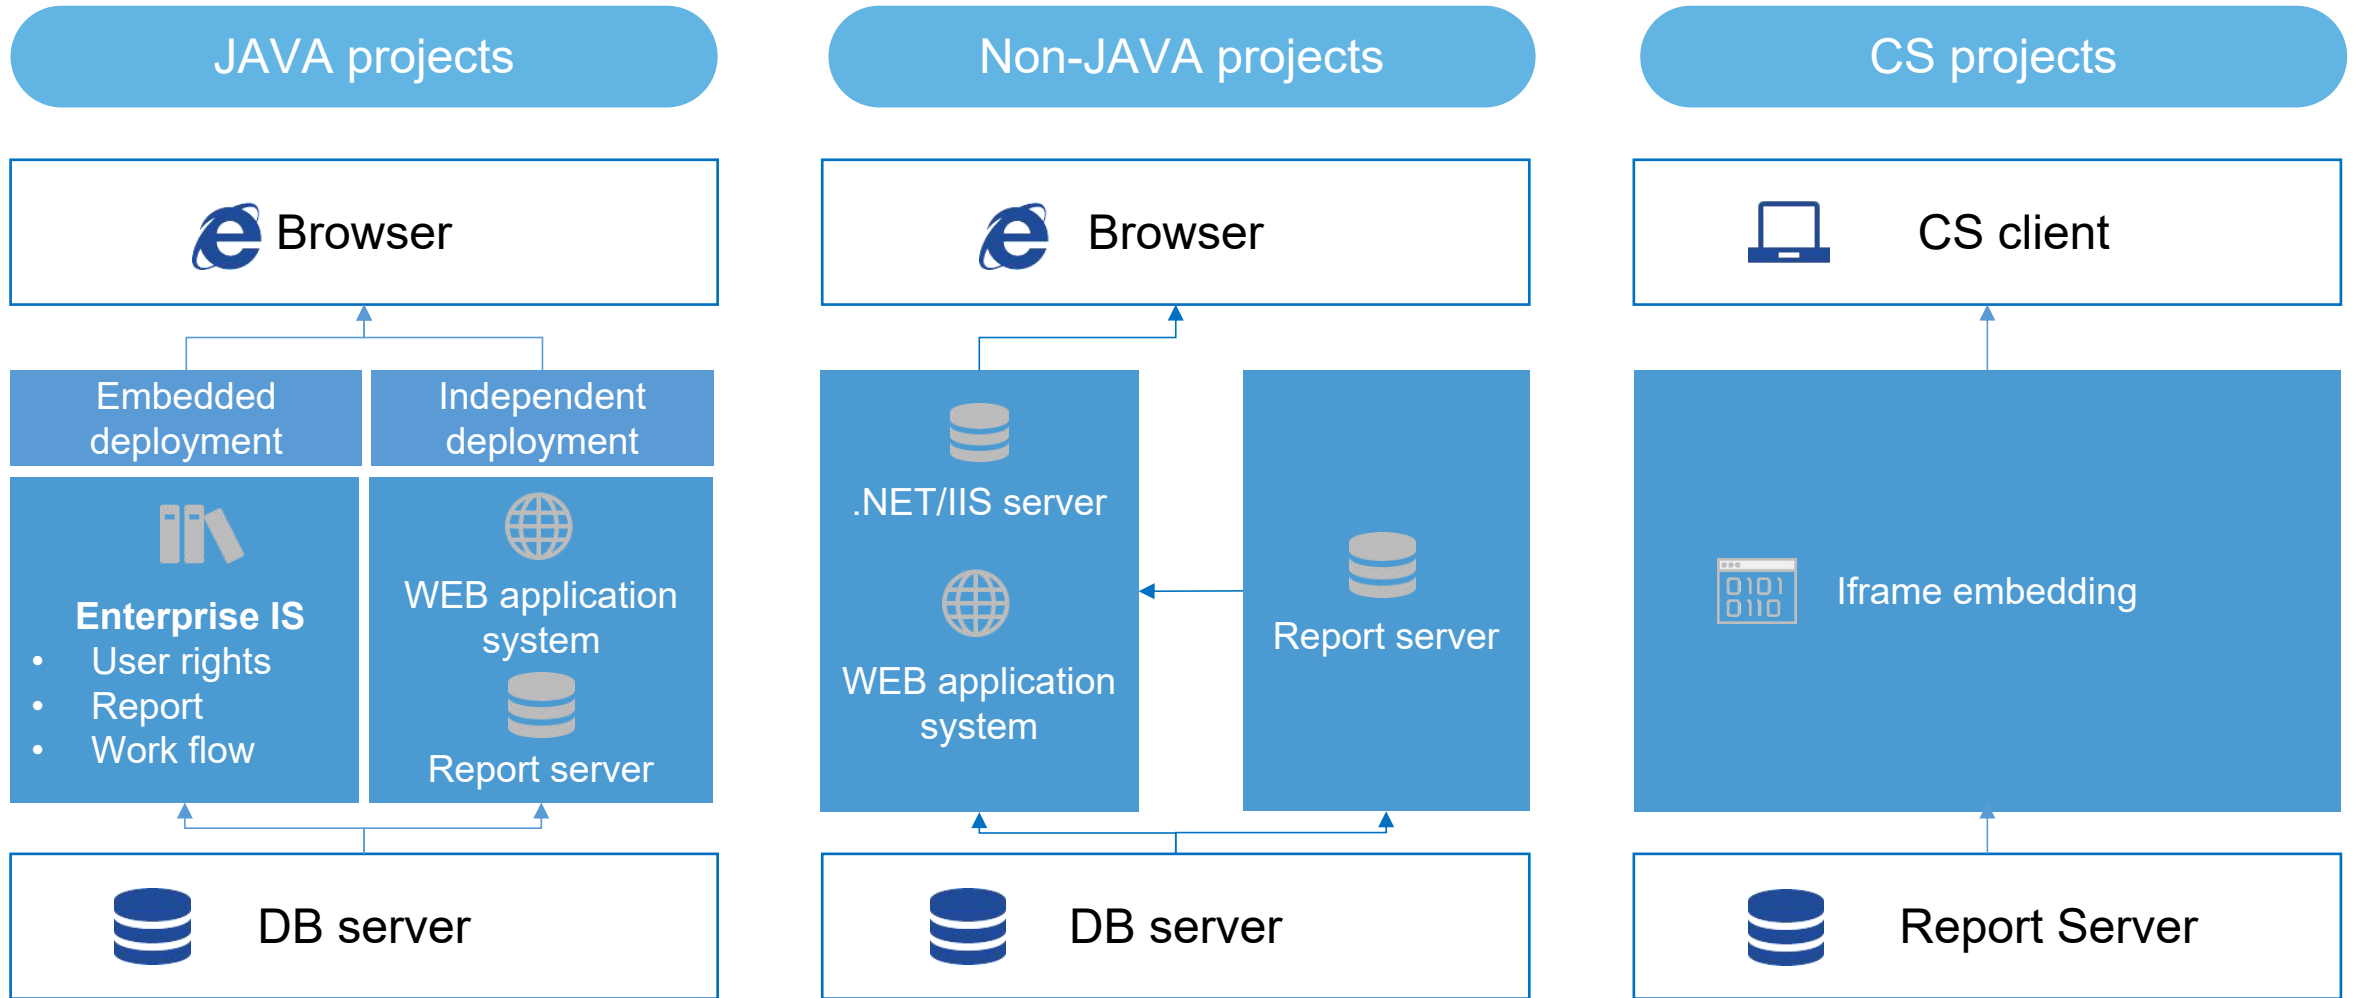

08

...

Deployment & Integration

8.1 FineReport is 100% Java Software: Support Deployment and Integration with Various Projects

8.2 Cluster: Improve System Performance and Reliability

1

High Consistency

All configurations and files made through the FineReport product can be synchronized to each node in the cluster at any time.

2

High Availability

All stand-alone features are supported. When one node crashes, the system can still behave normally.

3

Powerful Features

As the number of nodes increases, the concurrency supported by the system grows almost linearly, and the load of each node is more balanced.

4

Simple to Use

The cluster environment can be quickly configured through simple operations in the platform, where the addition and deletion of nodes supports hot deployment. In addition, you can monitor the health and logs of each node in the platform.

8.3 Single Sign On: Multiple Configuration Methods

1

AJAX

Support cross-domain, asynchronous identity authentication and authentication timeout processing.

2

iframe

Support cross-domain, but not asynchronous authentication. Does not support timeout processing.

3

Action submission

When the report authority is verified, the url in the form can be used to trigger the url verification, which is convenient and fast.

4

CAS single sign on

Support Central Authentication Service.
